Banker, Notary Public,
REAL ESTATE and INSURANCE.
Desirable property on Main Street and all parts of the town for sale and to rent.
Fitz's Stables,
SOUTHAMPTON, L. I.
Harness, Blankets, Sheets, Whips, Etc.,
FOR SALE.

THE HOUSE COMMITTEES

Speaker Crisp Makes a General Shake-Up.

SPRINGER'S HEAD IN THE BASKET

Wilson of West Virginia Heads the Committee on Ways and Means—Bland Again Chairman of the Coinage Committee—Holman Dropped From Appropriations.

WASHINGTON, Aug. 22.—The principal changes made by Speaker Crisp in the chairmanship of committees announced by him yesterday had been discounted in the public mind by the publications previously made concerning their composition. The chief surprise was therefore occasioned by the assignment given Mr. Springer. He had generally been accorded a place at the head of the Committee on Foreign Affairs in case of a transfer from the Committee on Ways and Means. No one had suggested him for membership on Banking and Currency. The announcement of the list as it was read from the Clerk's desk was the first intimation that members had of the Speaker's determination in the matter.

An intimate friend of Mr. Crisp said that he had consulted no one in arranging the list. The explanation of this action was, the gentleman said, that there was so much friction occasioned two years ago that the Speaker preferred to make the selection without advice or assistance and assume the entire responsibility for the work. In addition to the changes of the chairmen the rank and file of the committees have undergone an unusually radical change, former membership being, in many cases, no indication of continuance in service on that particular committee. The Coinage, Weights and Measures gets Mr. Bland again as chairman, and the committee is for free coinage by one. This, however, will not have much effect, as the silver bill will be out of the House before they can get to work. The Banking and Currency Committee is anti-silver. The chairmen of the various committees are as follows:

Ways and Means—Mr. Wilson (W. Va.).
Appropriations—Mr. Sayers (Tex.).
The Judiciary—Mr. Culberson (Tex.).
Coinage, Weights and Measures—Mr. Bland (Mo.).
Banking and Currency—Mr. Springer (Ill.).
Foreign Affairs—Mr. McCreary (Ky.).
Elections—Mr. O'Ferrall (Va.).
Agriculture—Mr. Hatch (Mo.).
Military Affairs—Mr. Outwater (Ohio).
Naval Affairs—Mr. Cummings (N. Y.).
Postoffices and Postroads—Mr. Henderson (N. C.).
Indian Affairs—Mr. Holman (Ind.).
Railways and Canals—Mr. Catchings (Miss.).
Private Land Claims—Mr. Pendleton (W. Va.).
Manufactures—Mr. Page (R. I.).
Pacific Railroads—Mr. Reilly (Pa.).
Labor—Mr. McCann (Ill.).
Patents—Mr. Covert (N. Y.).
Invalid Pensions—Mr. Martin (Ind.).
Pensions—Mr. Martin (Ind.).
Claims—Mr. Bunn (N. C.).
War Claims—Mr. Beltzhoover (Pa.).
Expenditures in Department of Justice—Mr. Dunphy (N. Y.).
Expenditures in Department of Agriculture—Mr. Edmunds (Va.).
Public Buildings—Mr. Crain (Tex.).
Library—Mr. Fellows (N. Y.).
Printing—Mr. Richardson (Tenn.).
Civil Service—Mr. De Forest (Conn.).
Election of President and Vice President—Mr. Fitch (N. Y.).
Alcoholic Liquor Traffic—Mr. English (N. J.).
Immigration and Naturalization—Mr. Geissenhainer (N. J.).

The principal committees are made up as follows:
Ways and Means—Wilson, West Virginia; McMillin, Tennessee; Turner, Georgia; Montgomery, Kentucky; Whiting, Michigan; Coker, New York; Stevens, Massachusetts; Bryan, Nebraska; C. B. Breckinridge, Arkansas; Bynum, Nebraska; Tarsney, Missouri; Reed, Maine; Burrows, Michigan; Payne, New York; Daltzell, Pennsylvania; Hopkins, Illinois; Gear, Iowa.
Appropriations—Sayers, Texas; Breckinridge, Kentucky; Dockery, Missouri; Conpton, Maryland; O'Neil, Massachusetts; Livingston, Georgia; Washington, Tennessee; Robertson, Indiana; Williams, Illinois; Coombs, New York; Henderson, Iowa; Eingham, Pennsylvania; Dingley, Maine; Grout, Vermont; Cannon, Illinois.
Coinage, Weights and Measures—Bland, Missouri; Tracy, New York; Kilgore, Texas; J. E. P. Stone, Kentucky; Allen, Mississippi; Bankhead, Alabama; Rayner, Maryland; Harte, Ohio; H. A. Coatsworth, Wyoming; McKeligan, Nebraska; Stone, Pennsylvania; Johnson, North Dakota; Dingley, Maine; Sweet, Idaho; Aldrich, Illinois; and Rawlins, Utah.

Banking and Currency—Springer, Illinois; Sperry, Connecticut; Cox, Tennessee; Cobb, Missouri; Culberson, Texas; Ellis, Kentucky; Cobb, Alabama; Warner, New York; Johnson, Ohio; Black, Georgia; Hall, Missouri; Walker, Massachusetts; Brodus, Pennsylvania; Henderson, Illinois; Russell, Connecticut; Haugen, Wisconsin; Johnson, Indiana.

Interstate and Foreign Commerce—Wise, Virginia; Price, Louisiana; Buckner, Wisconsin; Geary, California; Hook, Ohio; Patterson, Tennessee; Caruth, Kentucky; Durbin, Illinois; Brawley, South Carolina; Barlett, New York; O'Neil, Pennsylvania; Randall, Massachusetts; Storer, Ohio; Belden, New York; Hepburn, Iowa; and Fletcher, Minnesota.

Springer Disagreeably Surprised.
WASHINGTON, Aug. 22.—When asked for a statement as to the reasons which impelled the Speaker to depose him from the chairmanship of the Ways and Means committee, Mr. Springer said: "Not to say that I am surprised at my deposition from the chairmanship of the Ways and Means committee and appointment as chairman of the committee on banking and currency is only a feeble expression of the truth. I have had no intimation from the Speaker whatever as to his falling to reappoint me

as to his intention to make me chairman of the other committee.

"I go from the work to which I have given the best study of my life to a committee to the business of which I have given but little attention heretofore. I know nothing of the motives of the Speaker or of the object he had in view. He has assured me that he desired to do that which he thought was best for the country and the Democratic party. I hope he is not mistaken but opinions may differ. I do not care to make a further statement at this time."

PETERS SCORES STANLEY.

An Emphatic Charge That He Missed His Companions.

NEW YORK, Aug. 22.—Dr. Carl Peters, the African explorer, said that he wished to correct a statement which had been attributed to him in the interview published on his arrival from Europe on Friday. "Some papers have quoted me as saying that Stanley traveled like a gentleman, and I did not say so. From all that I could learn traveling through the same country that he did, I would say that he did not travel like a gentleman for he did not treat his European companions like gentlemen."

Stanley lived on good food himself and allowed his men to live as the negroes did. The French missionaries told me that they visited Stanley's camp at Usumbir and saw Stanley sitting at the head of the table eating European diet and drinking claret, while Emin Pasha, Mr. Mackay and the members of Stanley's party ate negro diet and drank water. I was told that some of the white men of Stanley's party had to abandon their tents and sleep in the open air, so that Stanley's boxes of wine could be taken along.

I was also told by one of the missionaries that when one of Stanley's companions had the fever and was not able to go on, Stanley took a horse and rode him, saying, "If my white men fall down what will my negroes do?" That was on Stanley's first trip, and I was told that he had a white man flogged on his last trip. Another thing, Stanley in his books and lectures excites the pity of his readers by stories of his men starving. Now I never lost a man from starvation. I always drove cattle when I was in doubt as to the country ahead of me. When men suffer for want of food it is due to carelessness. The rivers of Africa contain plenty of fish and there is plenty of game if other supplies fail. Stanley got plenty of glory and fame out of his travels and I admire him for it, but I do not admire the way he treated his men.

"Is there any trouble between Stanley and you?"

"No, none at all. I stood up for Emin Pasha when Stanley was against him, but that is all. I have no feeling against Stanley, but think the truth should be told."

"I wish you would say that it is impossible for me to answer all the letters that are sent to me. People write to ask if I know positively that Emin Pasha is alive, and to ask for my autograph and offer to go with me on my next trip to Africa. I have news of Emin Pasha since the report of his death, but do not know if he is still alive, but I think that he is."

ENCOURAGING OUTLOOK.

A Number of Large Mills Resume Operations at Pittsburgh.

PITTSBURGH, Aug. 22.—There was plenty of smoke issuing from countless chimneys of many iron mills yesterday in the vicinity of Pittsburgh. The sligo works of Phillips, Nimick & Co., went into operation. Three thousand men are at Jones & Langhlin's and every department is at work except four mills and the sheet iron rolls. The United States Iron and Tinplate Company's works is in partial operation as is also the Lockhart Iron & Steel Company at Chartiers. The Black Diamond Steel Works started in full giving employment to 4,000 people. Outside of the city there was a partial resumption at reduced wages at the National Tube Works at McKeesport. Three open-hearth furnaces were placed in operation at the Carnegie Homestead plant. The Oliver Coke Furnace Company fired 100 ovens at Uniontown employing 300 men. Before the end of the week it is expected that other large plants will be placed in operation.

The Treacherous Cable Line.

WASHINGTON, Aug. 22.—The cable line here claimed its third victim from among the members of Congress last night. A few months ago Representative Hooper of Mississippi was thrown from a cable car and injured so seriously that he was confined to a hospital for many weeks. About ten days ago Representative Oates of Alabama was similarly injured, and is still suffering from concussion of the brain. Last night Representative George W. Shell of South Carolina was knocked down and trundled along the fender of a cable car for some distance. He was badly cut about the head and bruised as well, and the exact extent of his injuries are as yet unknown. He was removed to his rooms at the Metropolitan.

A Thrifty Young Man.

CHICAGO, Aug. 22.—Chairman Thatcher of the Executive Committee on Awards is investigating a report that serious irregularities exist in the Austrian judging. The charge is made that Alfred Tausig, son of the Vienna pianist, has been judging performers in place of his father, who was appointed a juror in the Department of Manufactures on the nomination of the Imperial Austrian Commission. Alfred Tausig, jr., is also accused of opening negotiations for the sale of a medal to a Viennese of Vienna, who exhibits enameled ware.

Mary Not Remembered.

LOUISVILLE, Aug. 21.—The will of the late Dr. Hamilton Griffin, the stepfather of Mary Anderson, was admitted to probate yesterday in the county court. Dr. Griffin left all his property, consisting of several houses and land in different parts of the city, to his wife, and at her death to his four children. It is noticeable that no bequest whatever is made to his stepdaughter, Mary Anderson-Navarro.

Good Health at Quarantine.

NEW YORK, Aug. 19.—Dr. Jenkins reported from quarantine last night that the situation remains unchanged. All of the passengers continue in good health.

THE AGENT DID THE REST

Clients Merely Pulled the Purse String.

VAN LEUVEN'S PENSION MACHINE

All He Wanted Was Big Fees—He Made Up the Necessary Evidence and Amended Himself—The Pension Bureau Says He Put Through Hundreds of Fraudulent Claims.

WASHINGTON, Aug. 22.—The following statement is given out for publication by Pension Commissioner Lochren:

"So much apprehension concerning the attitude of the Pension Bureau toward the 'old soldiers' is current that it seems proper to make a public statement concerning matters growing out of the recent and now pending Van Leuven investigations."

"Mr. Van Leuven has for many years done a large pension business, having his office at Lime Springs, Ia. His clientele has been by no means confined to his immediate locality, but has been drawn from all over the States of Iowa and Minnesota, and even from more remote parts of the country. In June last, as a result of a preliminary investigation into his methods he was suspended by the Secretary of the Interior from practice before the Department. While it would be injudicious to enter into detail at this time as to the facts brought to light in the preliminary investigation, I will say that it was clearly shown that for years he has supported the claims which he has prosecuted by a highly developed and successful system of dishonest practices. At the time of his suspension evidence was before the Bureau showing beyond question instances of the purchase of testimony, fraudulent preparation of affidavits, bribing of sworn officials of the government, and wholesale deception of the applicants for pensions, by means of which they were induced to show their gratitude by the payment of fees and gratuities beyond the amounts allowed by law."

"It was apparent that all claims allowed upon ex parte evidence furnished by Van Leuven must be investigated. In the few cases inquired into at the time of the preliminary investigation, evidence of fraud was so plain and so numerous that every claim filed and prosecuted by him became inevitably an object of suspicion. Accordingly all his cases which could be at once identified in the files of the bureau were drawn and examined, and nearly 300 of these have been sent to Special Examiner Waite, at Minneapolis, for investigation. In such as seemed to rest wholly upon evidence prepared by Van Leuven—somehow more than 200 in all—suspension of payment was ordered, pending the necessary inquiry. This was in accordance with the uniform practice of the bureau for many years and is singular in this instance only by reason of the fact that the majority of the suspended pensions were drawn in a few adjacent counties."

"Special Examiner Waite has been for several weeks engaged exclusively upon these cases. In some instances it has been found practicable to rescind the order of suspension in advance of thorough investigation. In such cases there has been but a brief withholding of the pension. But in most of the cases the evidence upon which the original action of the bureau was based is now known to be so worthless that it would be a breach of official trust to continue payments before the facts have been thoroughly sifted. Doubtless there are some cases in which the temporary loss of the pension works hardship to worthy men, but no pains will be spared to ascertain such cases and make the period of suspension as brief as possible. It is not charged or believed that in each suspended case the pensioner himself has been guilty of misconduct. It was Van Leuven's practice to take the prosecution of his cases quite out of the hands of the applicant, and thus it often happened that honest claims in his charge were supported by dishonest means."

"Four special examiners, experienced employees of the bureau, are now engaged upon the Van Leuven cases in Iowa and Minnesota, and the work will be carried forward with the greatest possible diligence and dispatch. The ex parte evidence upon which each case is allowed will be fairly tested and if found honest and reliable payment will be at once resumed."

People's Party Nominations.

ST. LOUIS, Mo., Aug. 21.—The following were chosen to represent the People's party on the State ticket at the convention here Saturday: Secretary of State, James Wright of Elmira; Comptroller, D. M. S. Fero of Glen Falls; Treasurer, F. H. Purdy of Bluff Point, Yates county; Attorney-General, Thaddeus B. Wakeman of New York; Engineer and Surveyor, J. A. Webster of New York; Judge (Court of Appeals), Lawrence J. McParlan of Buffalo; delegates-at-large to the convention for the revision of the State constitution, Patrick S. O'Leary, Edward O. Ball, George Clark, Dr. Robert Boock, John Taaf, Dr. E. B. Foote, John J. Junio, Charles Connelley, George Gifford, Thomas W. Beecher, John J. Lipfert, Andrew Murray, Henry A. Hicks, A. J. Day and J. Evans Scudder.

Over Niagara Falls.

NIAGARA FALLS, N. Y., Aug. 21.—Edward Brennan, whose home is at 1780 Washington avenue, New York city, went out on the river in a sailboat at noon yesterday. While off Grass Island he attempted to fasten his craft to a steam yacht, in so doing his boat was overturned and he was thrown into the water. The crew on the yacht tried to save him and followed him down as far as they dared towards the "death-line," but finally had to give up as Brennan disappeared just before reaching the white line of breakers. His body has come over the American falls.

TO BIG TO HOARD.

That is Why Carter Harrison Would Put Silver Dollars in Circulation.

CHICAGO, Aug. 21.—"If I were President for 30 days I would give confidence to the business community and give work to the unemployed," said Mayor Carter H. Harrison. "I would put the 143,000,000 silver dollars now lying useless in the Treasury vaults in circulation. What is the trouble now? Scarcity of currency. And yet the Government keeps on issuing Treasury notes that can be locked up in safety deposit vaults by timid people. I would not issue single notes, but I would pay all national debts in silver and in that way bring the stringency to a sudden termination."

Silver cannot be hoarded. It is too bulky. Gold and notes can, and if the \$143,000,000 in silver were turned into the markets money would soon be plentiful. They talk of silver being an undesirable money, yet who to-day refuses to take silver dollars? Let the national Government pay all its debts in silver now stored away. A man who received \$500 in 'cartwheel' coins would not put them in a safety vault and he would not lug them about on his person. He would pay his debts and bank the rest. The banker, having currency, would accommodate his customers and then the wheels of commerce would revolve again."

ITALIAN REVENGE.

A Mob Attack a French Seminary in Rome.

ROME, Aug. 21.—The anti-French agitation, started in consequence of the massacre of Italians at Aigues Mortes, has gained ground rapidly. Saturday evening a mob attacked the Santa Chiara Seminary of French priests, smashed the windows and tried to force the doors. Further damage was prevented by the police, who are guarding the seminary as well as the French Embassy, as the anti-French agitators have threatened to sack it. In both Milan and Turin incendiary French manifestoes have been issued.

BERLIN, Aug. 21.—The relations between France and Italy are regarded here with considerable anxiety. In view of the popular demonstrations against the French in Italian cities since the massacre of Aigues-Mortes. The hostility displayed by the Italian agitators is believed to threaten very grave consequences, as it will irritate the French government just at the time when Italy is making her demands for reparation. Even the possibility of a Franco-Italian war and Germany's obligations under the Triple Alliance treaty in such an event are generally discussed.

SAME OLD STORY.

The Cashier Speculated and the Bank's Money Disappeared.

MILWAUKEE, Aug. 21.—The money of the South Side Savings Bank, which John B. Koetting squandered while cashier, went into deals of the Board of Trade. Receiver Barth says \$139,000 disappeared in that way. Mr. Koetting dealt through Jacob Wurster, a commission man, and the latter in case of losses drew on the bank, his checks being honored by Koetting. On the books it looked as if Mr. Wurster had overdrawn his account, whereas the transaction was simply a means of collecting Koetting's indebtedness.

Court Commissioner Roehr, John H. Koponeer, a brother-in-law of Koetting, and John Graf have gone to Denver to see Koetting. The latter two are on his bond as executor of the Shepardson estate, and as the estate has been squandered they are supposed to be desirous of having him dead over his Milwaukee property to them as an indemnity.

An Embezzler's Travels.

NEW YORK, Aug. 21.—A dispatch to the Times from Panama says: Francis H. Weeks, the embezzler, whose presence is desired by so many victims in New York, did not leave this city in July. The Times correspondent was informed when he first instituted his inquiries that Weeks took his departure last month. Further investigation shows that Weeks embarked under his own name June 29 on the steamer Costa Rica for Puntas Arenas. It is unlikely that he stopped long in that seaport. During this season of the year the climate on the coast of the Gulf of Nicoya is unpleasant to one not accustomed to it. So Weeks probably started at once for San Jose, the capital of the Republic. This city is at a sufficient elevation in the mountains to be at least more habitable.

Five People Instantly Killed.

LEROY, N. Y., Aug. 21.—An accident occurred here yesterday morning on the Lehigh Valley railroad crossing on Lake street, in which five people were instantly killed. Their names are L. J. Bovee, Mrs. L. J. Bovee, and their daughter Miss Ola Bovee, all of Leroy; Miss Nancy Wyck, daughter of the Rev. Samuel Bowden of 323 West 32d street, New York. Miss Bowden was visiting the Bovees, one of the most prominent families in Genesee county.

A Jersey Cyclone.

SOMERVILLE, N. J., Aug. 21.—A terrific cyclone swept over here yesterday evening. Trees and shrubbery were leveled to the ground, gardens and crops completely ruined, buildings unroofed and a vast amount of damage done. Eighteen hundred panes of glass in the storehouse at the depot were broken. All of the peach orchards and grain fields were ruined. In the First Reformed churchyard fully 300 sparrows are lying dead.

Weather Report.

WASHINGTON, Aug. 21.—For New England: Easterly winds, high on the southern coast; light rain on the coast; fair in the interior. For Eastern New York, Eastern Pennsylvania, New Jersey, Delaware, Maryland, the District of Columbia, Virginia and North Carolina: Cooler; northerly winds, high on the coast; rain except in western portion of Virginia, attending a hurricane centre moving northward.

Club House at Sea Girt.

SEA GIRT, N. J., Aug. 21.—The members of the New Jersey State Rifle Association have decided to build a club house at this place.

QUIET IN WALES.

Postponement or Abandonment of Threatened Labor Troubles.

LONDON, Aug. 22.—The threatened invasion of Ebbw Vale, Wales, by an army of 30,000 striking coal miners from the Rhondda Valley, whose intention it was to force the non-union miners to quit work, has not yet occurred, though the original intention was to begin the march Sunday. The weather was threatening during the day and toward evening it began to rain in torrents. This had a deterrent effect upon the strikers, but it is more than likely that the measures taken by the police and military to protect the mines and the working miners had more to do with the postponement, if not the actual abandonment of the programme than the weather. Every preparation had been made to receive the strikers and at the slightest attempt at rioting they would have found themselves under the guns of the military. Considering all the circumstances, the strike leaders thought discretion the better part of valor and the invasion for the present at least, is off. Many non-union men are working in the Ebbw Vale district now. They are under police and military protection, which will not be withdrawn until the danger of attack is past.

At Work Again.

TROY, N. Y., Aug. 22.—Justice Fursman has granted an order allowing receivers Kemp and Keenan of the Troy Steel and Iron Company to resume work at the Albany Iron Works and on the merchant train at the Rensselaer Iron Works, to complete the orders on hand, and also allowing them to sell merchant steel and iron at market rates. These departments of the company's plant will probably start to-day.

Robbed Fullman.

NEW YORK, Aug. 22.—Thieves Sunday night broke open the safe in the office of the Pullman Palace Car company in Jersey City and stole \$900 in cash and many valuable papers.

House Rule.

LONDON, Aug. 22.—Mr. Gladstone's resolution to close the Home Rule debate on Friday was adopted without division.

CONGRESSIONAL REPORTERS.

Quick Work of Stenographers and Typewriters During Congress.

Among many things left out, which are paid for out of the contingent funds, is the item of salaries for the official reporters. These are the men who write out the reports of proceedings and debates which make up the daily publications called the Congressional Record. There are five of them on the floor of the House, who sit at a table in front of the Speaker's desk. It is their duty to report every word that is said from the opening to the adjournment. Being all of them rapid stenographers, they manage by taking turns. As quickly as No. 1 has got 1,000 words put down, he holds up his thumb and No. 2 takes up the thread, very likely in the middle of a speech, while No. 1 goes down to a room on the floor below, where he dictates the 1,000 words which he has taken to two shorthand-writers—500 words to one and 500 to the other.

While the two shorthand writers are copying off their notes quickly in type-script, Reporter No. 1 goes back to his seat in front of the Speaker's desk. Meanwhile No. 2 has finished his 1,000 words and held up his thumb to No. 3, who in turn takes up the thread, while No. 2 goes down stairs and dictates—and so on, until No. 5 holds up his thumb to No. 1, and the business goes on as before. This arrangement renders it possible to have the complete type-written report of the House proceedings ready for the printer a few minutes after that body adjourns. It is the same way in the Senate. Thus each Congressman finds on his breakfast table next morning a complete report of everything that was said and done in the National Legislature on the day before. These skilled stenographers get \$5,000 a year each.

There are ten of them, and so it costs \$50,000 a year for the writing of the Congressional Record, the stenographers paying their own assistants. The printing of this interesting daily publication is done at an expense of nearly \$150,000 annually. During the last fiscal year it used up 325,000 pounds of paper and 1,038 pounds of ink. For the titles and ornamentation on bound copies 150 packs of gold leaf were required, valued at \$1,095. Five barrels of flour were consumed in the shape of paste for binding. During the first session of the last Congress the outlay on the printing of bills and joint resolutions for both House and Senate was \$71,880. During the two sessions 10,837 such documents were presented to the House and 4,056 to the Senate. Bills have to be printed and reprinted at all stages of their progress, so that a single one may have to be put into type a score of times before it becomes a law.—[Washington correspondent Boston Transcript.]

A Telescope Worth Having.

James M. Neal, one of the most enterprising and prosperous farmers in Washington County, Georgia, while in Sandersville was informed by the express agent that the telescope that he had been expecting had come, with the privilege of examination and immediate trial. As soon as convenient Mr. Neal went to the express office and received the telescope, and in company with his friend, Colonel Fleming, climbed to the top of the city hall, the highest building in the city, to try the power of the lenses on the surrounding country. They viewed the landscape over and took a bird's-eye view of Tennesse, Davisboro and Warren, and all the points of interest within the range of the instrument.

When Mr. Neal drew a focus on his plantation, which is five miles north of Sandersville, he remarked to his friend, Colonel Fleming, that he was satisfied with the telescope. He then shifted it to his pasture, where there were five Jersey cows, improved breed of hogs and varieties of live stock in abundance. He observed a great commotion among his cows and upon adjusting the focus to a noisy he noticed that a tremendous rattlesnake was the cause of the commotion. He quickly handed the telescope to Colonel Fleming, descended the iron steps, mounted his horse and in a short while reached his place, where he found two of his cows lying dead from the effects of the serpent's bite.

He searched diligently for the serpent and found him coiled under a mullein plant. Mr. Neal rushed to his house, got his gun, returned to where the rattlesnake was and emptied both barrels into his body.

Mr. Neal came to town that afternoon, bringing with him the rattles, which numbered fourteen and one button. He says "there is not enough money in the United States to buy his telescope."—[Atlanta Constitution.]

Three Kinds of Lightning.

The Egyptians of old believed in three kinds of lightning—one incapable of doing any injury, another more mischievous in its character and consequently only to be issued with the consent of a quorum of twelve gods, and a third, carrying mischief in its train and for which a regular decree was required from the highest divinities in the eastern skies. Curiously enough, modern scientists, following the lead taken by Arago, have also decreed that the varieties of lightning are threefold. The first comprehends that in which the discharge appears like a long, luminous line, bent into angles and zigzags and varying in complexion from white to blue, purple or red. This kind is known as forked lightning, because it sometimes divides into two or more branches before reaching the earth. The second differs from the first in the range of surface over which the flash is diffused. From this circumstance the charge is designated sheet lightning. The third class differs so widely from the more ordinary manifestations that many meteorologists have denied their right to be treated as legitimate lightnings. They neither assume the form of long lines on the one hand nor sheets of flame on the other, but exhibit themselves as balls or globular lumps of fire.—[Chicago Herald.]

Twenty-two years ago John Bahler of Battle Creek, Mich., became blind, and his eyeballs were removed. Now, it is said, that new eyeballs are growing in the sockets, and he is already able to distinguish colors.

DURED BY BOULDERS.

Curiosities of the West Virginia Allegheny Mountains.

On the crest of Panther Knob, the greatest elevation of the Allegheny range in West Virginia, there are great blocks of siliceous sandstone scattered here and there, sometimes with intervals of miles between them. Some of these masses of stone are larger than a small two-story house. These immense blocks are not an integral part of the mountains themselves, but the mystery of their presence is especially interesting in the case of two of the most tremendous cubes. On the top of each stone, near the center, is a hollow of several feet in the form of a basin. In the center of each of the basins is a hole, which has the appearance of having been drilled or bored out by a drill 12 or 13 inches in diameter.

The hole penetrates the stone perpendicularly for several feet, and then begins to take the shape of the inner part of a cistern. The sides of the hollows are worn as smooth as could have been done by the most expert marble or stone worker, and with symmetrical lines. The hollows are many feet in depth, and they contain, with one exception, nothing except a small amount of dust or debris, drifted in, doubtless, by the wind.

The exception is in the shape of a hard perfect sphere of stone, which appears to be a variety of granite. This stone is about a foot in diameter. Col. Fife, an ex-officer of the Confederate army, now dead, who had often visited the scenes through curiosity and a taste for the study of geology, told the New York Sun correspondent once that but two tenable theories could be entertained on the subject of those masses. One theory is that during a flood the great blocks of stone had been cast upon the mountains by the currents, and that in the swirl and rush of the currents of water the boulders of granite had been deposited on their top, and that the obstruction of the great masses of rock had caused a whirlpool which set the boulders in motion, causing them to grind their way into the heart of the stone. As the boulders descended, the friction finding less opposition in the softer rock below, gradually widened their rotary motion, until they reached a place where the centrifugal forces of the waters ceased.

The second theory is that the blocks of stone were deposited during the glacial period, and that the boulders were forced into the heart of the blocks in the same manner as described above. That the peculiar hollows were made by the action of water and the friction of the round boulders can scarcely be questioned, and in proof of that theory the Valley River, a mountain stream passing through Barbour county, and which is filled with masses of stone, some of which are as large as good-sized houses, has in its bed several round holes, some of unknown depth. These holes were doubtless made by the action of the currents upon boulders of great gravity, forcing them downward through the softer siliceous formation of the bed of the river.

The Flavoring of Bread.

Every baker now and then has the unpleasant experience of flour being virtually spoiled by absorption of some disagreeable odor. Thus flour placed near lime or oil or tar contracts a fatal flavor and is practically ruined. Why should not the baker, however, endeavor to turn this extraordinary property to good account and impart to his flour flavors which would make the resultant bread quite a rival to articles on well-to-do tables where at present the loaf is really out of the dietetic running? The miller at present does the blending for the bakers, and too often from a miller's point of pecuniary view, but if the baker could once master the art of imparting attractive flavor to flour, and so producing bread that would be distinctly nice and yet wholly free from sugar that is mawkish or cloying, it is evident that very much would be gained. At present, as we are well aware, this is a thing quite in its infancy; it is still in the experimental stage, but it is really open to any baker to apply the principle himself, and by testing his art on a small scale he might easily discover the way to greatly raise the value of bread made from flour that under ordinary conditions yields only a dry loaf attractive to the eye, but by no means tempting to any one who does not happen to be hungry.—[British Baker and Confectioner.]

Growth of Willow Trees.

Garden and Forest has received a photograph of a willow tree standing in Waterbury Center, Vt., the trunk of which measures twenty-four and a half feet in circumference, and whose symmetrical top shades an eighth of an acre of ground. A person who knows the early history of the willow testifies that in 1840 it was a tree about six inches in diameter, which had grown from a walking-stick driven into the ground a few years before by some children. In that year it was cut down deep into the ground in the hope of killing it, but it started a new growth, and has reached its present dimensions in fifty years. The rapid growth of the willow in favorable localities is well known, and Doctor Hoskins (from whom the photograph was received) writes of another near his home, which sprang from a cane carried by a returning soldier in 1866, and thrust into the soil in his dooryard. It is now more than four feet in diameter with an immense top, and bids fair, at an equal age, to reach the dimensions of the one spoken of.

The Original Use of Butter.

Butter, which is almost indispensable to the meal nowadays, was formerly used solely as an ointment. Herodotus, a Greek historian, is the first writer who mentions butter, B. C. 500. The Spartans treated it very much the same as we do cold cream or vaseline, and Plutarch tells how a hostess was sickened at the sight of one of her visitors, a Spartan, who was saturated in butter. The Scythians introduced the article to the Greeks, and the Germans showed the Romans how to make it. But the latter did not use it for food. They, like the Spartans, anointed their bodies with it.

FOR THE FAIR SEX.

ALMOST A LOST ART.

Among the present generation of girls buttonhole making may almost be reckoned as a lost art. But with the revival of practical needlework there seems also to be a revival of desire for good buttonhole making. It is an art that can only be acquired by patient practice, and she who tries to hurry her work is sure to spoil the beauty of it.—[Housekeeper.]

WHAT CHINESE THINK OF LACINO.

"A group of women in China," says the Louisville Recorder, "got hold of a fashion magazine from the United States. After examining it carefully for some moments, one of the numbers said to a missionary who had been talking to them against 'foot binding,' 'China woman pinch foot. You say China woman pinch foot. Melican woman pinch foot. Melican woman pinch here,' laying her hand on her waist. 'Life here, life not in foot. Melican woman pinch foot. What could the missionary say?' What could he, indeed?"

SUNSHADE FOR A BRUNETTE.

Specially suitable for a brunette is a sunshade in deep ripe corn colored thin silk. Inside it is a mass of tiny frills of satin-edged lisse, while outside there are three deep flounces of silk embroidered blonde, with a narrow, thick band of small scarlet Alpine poppies heading each flounce. Another handsome novelty is of moire silk, veiled with bouillonne triangles in silk muslin, and crossed star fashion, with radiated rows of gathered lacing pinked out at the edges, in keeping with the flounce drooping all round. This has an ivory stick, enhanced with gold top and knobs, or it may be incrustated with stones.—[New York World.]

FANCY JEWELRY THE RAGE.

The rage for fancy jewelry is on the increase. Flower and animal forms are still highly favored. All sorts of wild flowers are chosen for lace pins, hair ornaments and small buckles; sprays of valley lilies, single blossoms of hawthorn, pimpernel, chickweed, speedwell, geranium and heather, in gold or silver set with gems. A row of daisies, alternately frosted gold with a pearl heart, or with diamond chips, clustered on silver makes pretty brooches and bangles. Flowers are also combined with insects. For instance, a tiny bulrush in diamonds perched upon a twig of holly in enamel; a spider, with an opal-gay pearl of Labrador stone for his body, is clinging with his many diamond-set legs to a golden leaf. The newest thing in single flowers is the bee-orchid and the narcissus. The former may have its purselike cup covered with little sapphires, and the petals in diamonds, or vice versa. The narcissus is in plain burnished gold with a brilliant in its center, or in diamonds and topazes.—[New York Advertiser.]

A BONANZA QUEEN'S JEWEL CASES.

Mrs. J. W. Mackay has two especially fine jewel cases. One, two feet square, is of solid silver, and holds the ornaments she wears and keeps for ordinary use. The other is of gold and three-quarters of a foot square. The top is entirely incrustated and thickly studded with precious stones, some of which are over a carat in weight. This gold box is tufted with royal purple velvet. There are three trays, which are fastened in with a patent spring, of which Mrs. Mackay alone holds the secret. When the tiny golden key is turned to open the box, an alarm is started from a tiny alarm clock fitted into the inside, and thus is every precaution taken to guard the enormous value of the contents of Mrs. Mackay's "gold box," as it is always called. Her silver jewel case is less intricate, as well as less beautiful and costly. The lid and slides are heavily chased, and it opens with a secret spring. The trays have spring fastenings. The lining is of dark blue satin, so dark as to be almost black. The gold case has an outside case of thick black ebony, heavily clamped, and a top-handle of gold with which to carry it. The silver case has an ordinary Russia leather cover, with a silver top-handle. When traveling Mrs. Mackay's faithful courier can always be seen with one of these cases in either hand. He is always well armed.—[San Francisco Examiner.]

A FEMALE CRUSOE.

The recent earthquake and electrical disturbances at San Nicolas island, near Santa Barbara, Cal., has revived interest in the story of the old Indian woman who led a Crusoe life on the island for many years and who was finally removed to Santa Barbara only to die from the effects of unaccustomed civilization. The following sketch of this female Crusoe is from "Santa Barbara and Around There" by Edward Roberts:

On the smallest island was enacted the tragedy of the "Lost Woman of San Nicolas," which at Santa Barbara is a familiar tale. The story begins with the removal of a number of Indians from San Nicolas in 1836. Just as they were embarking one of the women discovered that her child had been left behind. Returning for it, she was abandoned by her companions, who were obliged by a coming storm to set sail for the mainland. It was intended to return so soon as the weather permitted, but years passed away and the woman in time was forgotten and left to her fate.

Twenty years later, a hunter named George Nidever of Santa Barbara, visited the island for otters. While there he determined to look for the woman. After careful search he found three huts made of whale-ribs and brush, and from where they stood extended an open plain, in the center of which Nidever saw the object of his journey. The woman's dress was made of skins and feathers, and her hair hung in tangled masses from her bare head. When discovered, she was cutting blubber from a seal which she had killed, but on seeing her visitor she recoiled with every manifestation of delight, and readily accompanied him to his boat. Signs were made for her to enter it, and on her doing so, Nidever sailed for the bay, and brought his charge to Santa Barbara.

Her arrival there created great excitement and hundreds called at Nidever's house to see her. Although she could not have been more than fifty years old, she was gray-haired and emaciated. Her expression was one of blank ignorance and her skin was dry and wrinkled. Her language, strange as it may seem considering the comparatively short time she had been lost, was unintelligible to all. Those who considered them, selves masters of every Indian tongue could not understand a word that she said. Owing to this fact the story of her hermitage was never known. What became of the child she returned from the boat to find on that fatal day in 1836 is a matter of pure conjecture. How long it lived and where it was buried were facts that could not be discovered. The woman appeared to have lost all human instincts, and to every question asked made no answer that could be understood. In three months after her rescue she died and was buried by the Mission fathers.

FASHION NOTES.

Real lace veils of the large old-fashioned size are coming into style again.

White gloves have returned to favor for morning as well as evening wear.

White kid and suede sailor hats are new this season, but straw takes the lead, with quills for trimming, while a more fancy sailor has roses around the crown and under the brim.

The thing just now in finger rings is to acquire three half hoop rings—one in diamonds, one in rubies and one in sapphires or emeralds—and wear them all on the same finger.

The coarser laces—point de venise, guipure and Irish point—are the most effective for trimming purposes.

Colored linen, with watered silk trimmings, is the newest fancy for the outgoing girl's suit.

Skirts are becoming just a little less triangular in shape, and evening bodices are perhaps not quite so much trimmed.

Moire antique is coming to take the place of satin. It is used for gowns, wraps and as a trimming for anything really smart.

White muslin trimmed with Valenciennes lace, is coming in again for bridesmaids' gowns.

Serges, flannels and soft tweeds are de rigueur, but our climate is so varying that cooler weight materials are admissible. That called sail cloth is the very latest novelty. It is a soft and pliable woolen fabric with a loose weave, has little weight, but sufficient warmth.

What is called "white wool grenadine" is a new material that has appeared for evening dresses.

To clean white ostrich plumes dissolve four ounces of white soap in four pints of hot water. Make a lather and plunge the feathers into it, rubbing them well with the hands for five or six minutes. Wash out in clear, hot water and shake until dry.

Paris is advocating flesh-colored suede gloves for evening wear in place of the pure white so long worn.

A fine quality of ladies' cloth, which is now called habot cloth, is an extremely popular material. It comes in all the exquisite new shades and is used not only for tailor-made costumes, but for those that are much more elaborate.

The very newest form of skirt trimming consists of frills round the hips.

A revival of the long mousquetaire gloves for afternoon wear is said to be threatened.

Emerald green and rose color are the favorite combination in Paris at the present moment. There is a new and effective kind of coarse net in black or color, which is made up over a contrasting silk. In black it looks remarkably well over vieux rose or pure white.

A novel veil is of accordion plaited black net or gauze.

Nothing looks more ladylike than white serge, and the girls one sees wearing it give one the impression that they feel the heat less than other folks. A charming costume of this material was made in the plain skirt and coat fashion and worn with a cross over waistcoat of white silk.

White duck dresses made simply with plain skirts and open jackets look delightfully cool and easy. They are usually worn with colored silk shirts.

A bizarre effect was seen at a recent swell dinner when an electric light was seen gleaming through a cake of ice placed before it in more than one corner of the room.

AROUND THE HOUSE.

To clean the woodwork in your halls and rooms do not wash it. Soap destroys the looks of woodwork that is finished in natural colors. Wring a flannel cloth out of hot water and wipe off the dust. When all the woodwork has been dusted in this manner go over it with a woolen cloth made damp with cotton-seed or sweet oil and alcohol or turpentine; two parts oil and one alcohol or turpentine. Rub hard and with the grain of the wood, then rub with clean flannel. It will revive the color and gloss. Light woods must be wiped with a damp flannel and polished with a dry piece of flannel. When cleaning paint it is a good rule not to have the cloth so wet that the water will run on the paint, as it will leave streaks. Wash only a small place at a time. Wash the blinds with clear water. When you come to the window ledges do not use so much water that it will run down on the outside of the house, marring the appearance of the walls. Always rub with the grain of the wood. To clean the railing of banisters wash off all the dirt with soap and water, and when dry rub with two parts of linseed oil and one of turpentine. If the odor of turpentine is objectionable use two parts of sweet or cotton seed oil and one part of alcohol; but the mixture of linseed oil and turpentine is more desirable.

There seems to be a special demand for the black fan. These are made in plain black silk, mounted on sticks of bright yellow, red or dull olive brown, and, though they are Oriental fans, they are known by the French name of "empire."

FOR THE YOUNG FOLKS.

FINE SPORT.

All day long, with a serious look, Toddlekins Toddleby fished in the brook; What did he bring when he came home late?

Two wet feet and plenty of bait!

—[Youth's Companion.]

NOW ENGLISH BOYS TRAIN PUPPIES.

English boys excel all others in the way they train their puppies to grow up and become good dogs. Their mastiffs are the most sagacious, their hunting dogs are the most skillful, their collies "heel" beyond all criticism, and their greyhounds are fleet past all believing. You should read the records when the dogs race each year for the Waterloo cup. When an English boy trains his dog he is very firm with him but very kind. Young Johnny Bull never loses his temper with his faithful four-footed friend. When he sets out to teach his dog a trick, he coaxes him untrillingly and rewards him plentifully. If doggie is out of spirits, he is allowed to rest until he feels better; and if punishment is administered, it is done at the time and not delayed until doggie has forgotten his misdemeanor. Teasing is never indulged in, nor is the whip ever playfully flourished to strike terror to the poor fellow's heart. If it is wrong for doggie to do a thing to-day it is wrong for him to do it to-morrow. And good food is fed to him on a clean plate and he gets bones to gnaw only for his amusement, just as boys sometimes like to chew licorice-root or sassafras-bark; but, of course, they do not want it for dinner. When you train a fine dog, remember that training means a course of teaching and coaxing and not a course of bullying and beating. Remember that doggie is as proud to have fine accomplishments as you can possibly be to have him possess them. Be patient with the faithful fellow and reward him plentifully. He will show that he appreciates it.—[New York Ledger.]

THE SALE OF "JACK."

There is something almost pathetic in the sale at public auction in New York City a few days ago of "Jack," the Central Park donkey and the children's friend. The descendant of Balaam's famous steed has done duty in the city's great playground for more than a quarter of a century, and if given the power of speech could weave many a romance in which the great men and famous beauties of the metropolis played heroic parts years ago when they were in the kindergarten state. "Jack's" antecedents are somewhat hazy, but it is known that he emigrated from Ireland in the '60's and was soon after purchased by the city to carry Father Knickerbocker's little ones about Central Park on his back and drag them around in a tiny cart at so much an hour. Now, in addition to the natural attraction for children of a three-foot donkey, there is a tradition, having its origin in Ireland, that if sick babies and children walk under a donkey their ailments, if nothing more serious than whooping cough, toothache, stomachache and the thousand and one little things with which children are affected, will disappear, so that when "Jack" made his appearance he became the object of many pilgrims in arms. That he discharged his duty well was soon attested by the mothers of the cured children, and "Jack's" future seemed assured. For the past twenty years he has borne the budding beauty of the town on his back and performed miracles between times. Many a well-known woman in New York society can probably look back to the days when she rode on "Jack's" back as the beginning of her life romance. Yet in spite of his years of faithful service, when old age seized upon "Jack" and sapped his strength, when he was no longer a source of profit to the city and uncongenial in his treatment of the children, he was cast aside and sold to the highest bidder. It will strengthen your faith in humanity to know that the bidding was very spirited in a small way among "Jack's" old admirers, and that he was finally knocked down to a Mr. Moore of Philadelphia for \$325 and will spend the remainder of his days in the juiciest of clover on a farm near the Quaker City.—[St. Louis Republic.]

THE BLACK HEN'S NEST.

Leon and Lida were spending a week at Uncle John's in the country. They thought it great fun to bring in the eggs and hunt for new nests.

"I believe the black hen has made a nest in the barn floor," said Aunt Hannah. "She never did like to lay in the hen-house, but is always hiding her nest in some queer place. If you'll find where she lays I will give you each five cents."

"Oh, goody!" said Leon; "and may we go to the store and buy candy?"

"Yes, if you find the nest," said Aunt Hannah.

The children ran eagerly to the barn, for if there was any place in the world where they enjoyed going it was to the country store. Mr. Whipple was so kind, and he sold almost everything that people needed to buy.

"Oh, here is a hole big enough for a hen to go, behind the hay-mow," said Leon.

He put in his hand, but sprang back with a low cry.

"Oh, my! there is something soft and warm and alive in there," he cried.

Just then Tibby looked out from the hole.

"She's got some kittens," cried Lida.

"Do take them out, Leon."

Leon brought out four black and white kittens.

"You little darlings!" cried Lida.

"Let's carry them to the house."

They put them into the basket and ran to show them to Aunt Hannah, who was standing at the table ready to cook.

"We've found a nest," said Leon.

"Just see what we've got in the basket."

"Well, if that don't beat all, laughed Aunt Hannah; "but I had rather have a basket of eggs than kittens to bask with."

"We're going now to find the hen's nest," said Leon.

They carried the kittens back to their anxious mother, and just as they went into the barn the black hen flew down from an old fanning-mill, cackling loudly.

The children climbed up, and there was a nest of sixteen eggs.

"Well done!" said Aunt Hannah. "Here is your money. I'm sure you have earned it."

"Maybe we shouldn't have found it if the old black hen hadn't told us where her nest was," said Lida.

"You found it just the same, if the black hen did help you," laughed Aunt Hannah; "so run along to the store and get your candy!"

"And if you don't mind, Aunt Hannah," said Leon, "we'd like to ask Robert Allis and Gertie Dodge to go, too, 'cause they hardly ever have any treat."

"I am more than willing," said Aunt Hannah.

Then she gave them both a kiss and an extra nickel for the "treat," and sent them away very happy.—[Youth's Companion.]

POPULAR SCIENCE NOTES.

REVIVING FROZEN BUTTERFLIES.—Insects that spend most of their lives in a torpid or semi-torpid condition are not always killed by being frozen. Instances are numerous of travelers in the Rocky Mountains finding butterflies above the snow line, frozen stiff. When carried to a warmer climate or into a cabin they often completely revive. Their normal vital power is so low that a degree of cold that would prove fatal to other creatures does not kill them.

NEW METHODS OF TRANSFERRING LIGHT.—How can a gas jet be lighted from another without the intervention of a match or anything else that can be set afire is the question here arising. The gas jets must be in the same room about six feet from each other. Only one of these jets is lighted, and the other turned on full. If the burners are of the regulated kind the glass globes must be removed. All this, of course, must be done before the experiment is made. When everything is ready, the two hands of the person operating are formed into a hollow around the lighted jet, bringing them as close together as possible. A moment later, and just as rapidly as possible, the hands, without separating them, are held over the unlighted jet, enough of the illuminated gas being carried along to set fire to the second jet. If the first trial should prove a failure, the experiment need not be discouraged. The hands have either been held too far apart or the pressure of gas was not great enough at the proper moment. Several trials will invariably result in success.

LIMITATIONS OF OUR SENSES.—We gain our experience of the world through our senses. Man is born with intellect, and through the senses that intellect is trained. The new-born baby possesses already some knowledge of touch acquired before birth, and this knowledge he afterwards rapidly expands by constantly feeling his body over and over, as if in exploration of unknown territory. Later he acquires the faculties of hearing and seeing, and likewise of tasting and smelling. Now these senses, five in number, are they which train the intellect. They are all very imperfect. Sight: but the greater part of the solar spectrum is invisible—that is to say, more rays which come to us from the sun are invisible than those which our eye can see. Hearing: But there are sounds so low and sounds so high that they are inaudible. Taste and smell: Very imperfect. Touch: But there are millions of particles of dust to the square inch of the hand which we cannot feel. Yet, even with these imperfect means of education, many men have reached the conclusion satisfactory to themselves that they are clever; but the wisest man knows nothing in comparison with perfect wisdom. The whole of the known universe consists of matter in motion. All sensation, everything we know of the outside world, comes to us through motion. The motion sets up a movement in the nerve ending, on the skin, on the retina of the eye, or wherever the proper ending capable of receiving the particular motion may be situated. This motion is carried from the nerve ending along the nerve to the special central organ of the brain where it is interpreted. Light, sound, touch, taste, and smell are the only forms of motion we are capable of appreciating, because for each of these forms of motion we have a special apparatus which can receive, transmit, and interpret. There are other forms of motion which we cannot appreciate—magnetism, for example—and this simply because we have no nervous mechanism which responds to that kind of motion. In like manner there can exist around us forces in infinite variety of which we have absolutely no knowledge whatsoever.—[Popular Science Monthly.]

The Curling Sword Snake.

There is a little reptile belonging in Madagascar known as the scimitar snake, that is, the curling sword. Running along the back from head to tail is a blackish, horny substance, which bends with the convulsions of the snake's body as readily as would a well-tempered steel spring, and throughout its entire length it bears an edge as hard as flint and as sharp as a razor. They are not poisonous, but when one springs on a man, which he is very likely to do, he will soon have a leg off unless cracked on the pate. Some snake specialists claim that the presence of this reptile on the island is the reason that there are no large quadrupeds to be found there at present, the curling sword in back ages having taken off legs faster than they could be created.—[Chicago Herald.]

Real Eloquence.

There are different notions of the quality of eloquence. Upon one occasion many years ago, when we were engaged in getting up a lyceum course, the silver-tongued Wendell Phillips was engaged, and an old man came out of the woods several miles off to hear him. He listened with deep disgust to the smooth and polished sentences of Mr. Phillips, delivered in his well-modulated tones, but without especial vigor or gesticulation. At the close the old man turned round and exclaimed:

"D'ye call that eloquence! Why, our minister, Parson Brown, could beat that to a flint. He'd reel off the talk, pound the desk and holler like a loon. That's what I call real eloquence."—[Yarmouth (N.S.) Register.]

The recent earthquake and electrical disturbances at San Nicolas island, near Santa Barbara, Cal., has revived interest in the story of the old Indian woman who led a Crusoe life on the island for many years and who was finally removed to Santa Barbara only to die from the effects of unaccustomed civilization. The following sketch of this female Crusoe is from "Santa Barbara and Around There" by Edward Roberts:

On the smallest island was enacted the tragedy of the "Lost Woman of San Nicolas," which at Santa Barbara is a familiar tale. The story begins with the removal of a number of Indians from San Nicolas in 1836. Just as they were embarking one of the women discovered that her child had been left behind. Returning for it, she was abandoned by her companions, who were obliged by a coming storm to set sail for the mainland. It was intended to return so soon as the weather permitted, but years passed away and the woman in time was forgotten and left to her fate.

Twenty years later, a hunter named George Nidever of Santa Barbara, visited the island for otters. While there he determined to look for the woman. After careful search he found three huts made of whale-ribs and brush, and from where they stood extended an open plain, in the center of which Nidever saw the object of his journey. The woman's dress was made of skins and feathers, and her hair hung in tangled masses from her bare head. When discovered, she was cutting blubber from a seal which she had killed, but on seeing her visitor she received him with every manifestation of delight, and readily accompanied him to his boat. Signs were made for her to enter it, and on her doing so, Nidever sailed for the bay, and brought his charge to Santa Barbara.

Her arrival there created great excitement and hundreds called at Nidever's house to see her. Although she could not have been more than fifty years old, she was gray-haired and emaciated. Her expression was one of blank ignorance and her skin was dry and wrinkled. Her language, strange as it may seem considering the comparatively short time she had been lost, was unintelligible to all. Those who considered themselves masters of every Indian tongue could not understand a word that she said. Owing to this fact the story of her hermitage was never known. What became of the child she returned from the boat to find on that fatal day in 1836 is a matter of pure conjecture. How long it lived and where it was buried were facts that could not be discovered. The woman appeared to have lost all human instincts, and to every question asked made no answer that could be understood. In three months after her rescue she died and was buried by the Mission fathers.
