During the past Five Years the "standard" Organ Has pushed its way into the Front Rank, and is now the

FAVORITE ORGAN in America, Europe, and Australia.

CONSIGNERS—P. FALK & CO., GAWLER PLACE, ADELAIDE.

ARGUMENTATION.

It matters not whether it is in regard to buying a pig, or electing a member of Parliament, having the city lit with kerosine, or borrowing five millions for the benefit of posterity, debate is sure to be called into requisition; questions also which scarcely affect the individual and concern the general public very little are discussed with wonderful pertinacity; and yet, strange to say, a most important one—"Where shall I select my clothing," which affects every man either in his appearance or his pocket, is too frequently left to chance—Sound Argument says—Go to SHIERLAW'S.

CLOTHING—TAILORING—CLOTHING. Shirts, Hats, Scarfs, Braces, Tweeds and Doeskins, Blankets, Bush and Fancy Rugs, Hosiery, Carpet Bags, Portmanteaus, Collars, &c., &c.

G. & W. SHIERLAW, GLASGOW HOUSE 11 and 13, Hindley Street.

N.B.—The Tailoring Department is under the able management of our Mr. J. Craig Shierlaw. Spacious Fitting-rooms, and a Suit Made to Order at Six Hours' Notice.

TESTIMONIALS.

Dear Mr. Hutton—I beg to bear testimony to the value of your Washing Machine. I think every dwelling-house should possess one. It would prove a special boon in cottage homes where it is important to get the slop out of the way quickly. Our week's clothes for eight persons were began and ended in two hours. Attention to printed instructions must prevent cause for complaint.—I am, dear Sir, gratefully yours,

JANE PRIOR, Skilly Creek, Leasingham.

Mr. Hutton. Dear Sir—Having one of your Australian Revolving Washing Machines in use for some time I have proved it to my satisfaction to be a very useful article, a clean washer, reducing the labor considerably. I believe it to be the best machine for washing in use. Would recommend it to everyone.—Yours truly,

THOMAS NINNES, Clare.

Manufactured by F. K. GURNER, Cooper, Currie street, Adelaide. Price List post free on application.

A. FISHER'S PATENT STAR WASHING MACHINE.

Extracts from Testimonials.—CIRCULATING FLUE BOILER. Mrs. C. Volbrecht, Stockade—"The Star I have works in a most satisfactory manner." Mrs. F. W. Wood, Walkerville—"Our Star Washing Machine works easily and speedily, saves soap, and will wash the largest blankets or the smallest articles without injury. A week's unsoaked washing for nine finished under three hours, including boiling. No household should be without one."

A great number of other Testimonials may be seen at the Factory. Late improvements make the STAR the most EFFICIENT and most DURABLE WASHING MACHINE. Its kind yet made. Quite portable and most durable. It will cause the water to boil much quicker with far less fuel than the ordinary article.

Manufacture—O'Connell Street, North Adelaide.

Nathl. Oldham, IMPERIAL CHAMBERS, Adelaide.

LICENSED LAND BROKER, AND Financial Agent.

MONEY TO LEND in any amounts. Mortgages, Leases, and Transfers prepared. Farms Sold and Purchased. Land taken up for Selectors. Monetary and Landed Business of every kind transacted.

Refreshment Rooms, OPPOSITE HILL & CO.'S BOOKING OFFICE, CLARE.

RESTRAINT FORMS for Sale at the "NORTHERN ARGUS" OFFICE.

A FEMALE CRUSOE.

The San Francisco Call contains an interesting account of an Indian woman who was accidentally abandoned on San Nicolas Island, off the coast of Southern California, and spent 18 years alone there before she was rescued. The fact of her existence was discovered by a man who went from the mainland to hunt for otters, and who found footprints sunk deeply in the ground. He was unable to follow these indications till nearly three years, when one of a party who accompanied him came suddenly upon the object of their search. She was in a small circular enclosure made of brushwood, about five feet high and six feet in diameter, with a small opening on one side. She was clothed with a garment made of skins of the shag, a species of duck that can neither walk nor fly. This garment reached almost to her ankles when she stood erect. She was sitting cross-legged, skinning a seal-blubber with a crude knife made of a piece of hoop-iron driven into a piece of wood. There was no covering on her head except a thick-matted mass of hair, of yellowish brown color, probably owing to exposure to the sun and the weather; it was short, as if the ends had rotted off. There were some wild dogs on the island, a few of which kept near her, and seemed to regard her as a mistress. She had lived on a plant resembling cabbage, called by Californians *palo santo*, and a root known by the name of *coronilla*, also blubber of the various kinds of seals, &c. She had a rude apparatus for catching shellfish, and strong fish-lines made of seal sinews, which she used to indicate that she fished in the ocean. The expression of her face was pleasing, her features were regular, her complexion much fairer and her form more symmetrical than that of the Indian women on the adjoining mainland. Some suspect that she belonged to a tribe much further North. She could not understand anything said to her in any of the Indian dialects of Southern California, but she had a wonderful capacity for conversing by signs. She retained all her teeth, but they were worn low—supposed to be due to her chewing tough and hard articles of food. Her age appeared to be fifty years. She bowed to all who came near her, greeting them with a smile. She freely accompanied her discoverers to their vessel, but her conduct at once convinced them that she retained the virtue of female modesty. She showed singular dexterity in making water-vessels from grass and asphaltum—a substance which is plentiful on the island and on the mainland. She seemed to recognise various appliances of civilisation. She died about seven weeks after reaching the mainland, partly from the effects of a fall, partly from dysentery, brought on by eating fruits and vegetables. Padre Gonzalez, the superior of the mission of Santa Barbara, has sent her dress of shag skins and her basket and implements to Rome, to the museum of the Propaganda.

THE DISCIPLINE OF THE NAVY.

Referring to the late terrible explosion on board H.M.S. Thunder, one of the London newspapers says:—

We know at length how that huge ironclad was cleared for action at a signal from the admiral; how the watertight compartments into which the vessel is divided were closed by the men at their stations, and the guns loaded. We learn how, following one broadside, fired at an imaginary enemy, there came a "strong report," and after what followed the ship's company became aware that something was wrong. The men remained, each little party in its own compartment, with the lights all out by reason of the explosion, and the knowledge that whatever had happened they must prepare to die if need be, without opening the partition doors in order to save the ship. One who is at the bottom of the ladder which leads to the battery deck is sent to sound the bells, and as he tries to pass along the deck he finds the main hatchway choked with a torpedo, and filled with smoke and flame, himself and his comrades "like rats in a trap." When eventually he succeeds in his mission the sight which meets his eyes is terrible in the extreme. Men who but a moment before were hale and well lying blackened and disfigured so as not to be recognisable; others are striving to lead away those less injured than themselves; while from some of the dying comes a cry that comrades "who are even worse than they" should be attended to first. There is no uneasy fright manifested. Yet no one quits his post. In the annals of our Navy there is many a brave record, and the tale of how our seamen have done their duty is known in every land; but, from the foundering of the Birkenhead until to-day, has no story been related in which these marvellous qualities have been more plainly set forth than on the occasion of the explosion aboard the Thunder.

POPULATION DENSITY AND RATES OF MORTALITY.

Some curious and interesting results are developed by Dr. Farr, F. R. S., from a study of the rate of mortality in connection with statistics of population density. He finds that the rate of mortality increases as density of population increases, and this he proves by arranging the 612 districts of England and Wales in groups according to the rates of mortality, and showing that all the groups follow this law. Thus in the ten years 1861-70, at one end of the scale the deaths per 1,000 of population are 15, 16 and 17; at the other end, 31, 32, and 33. The rates per capita in the corresponding districts are 12, 14 and 3, and 1.01, 0.51 and 0.1. The intermediate rates of mortality are 18, 19, 20, 21, 22, 23, 24 and 25, while the rates per capita are 4, 3.3, 2.9, 2.1, 1.1, 0.5 and 0.2. Now, excluding the London districts, about which there is some difficulty, we have 7 groups of districts where the mortality ranges thus: 17, 19, 23, 25, 32, and 39. In the same districts the number of persons to a square mile is 166, 183, 379, 1,718, 4,499, 12,351 and 63,823. Thus in Liverpool, the densest and the unhealthiest district in England, there were 63,823 to an acre; of whom 39 per 1,000 died annually. This series of facts may be put in a different way: the nearer people live to each other the shorter their lives are. Thus the proximity of people in 53 districts is 147 yards, the mean duration of life is 51 years; in 345 districts the proximity is 139 yards, and the mean duration of life is 45 years; in 137 districts the proximity is 98 yards, and the mean duration of life is 40 years; in 47 districts the proximity is 46 yards, and the mean duration of life is 35 years; in 9 districts the proximity is 25 yards, and the mean duration of life is 32 years. In Manchester district the proximity is 17 yards, and the mean duration of life is 29 years; in Liverpool district the proximity is 7 yards, and the mean duration of life is 20 years.

This is a determined law, and the duration of life being given in one set of conditions, the duration of life in another set of conditions is determined from the proximities.—*Popular Science Monthly.*

PIGS AND BACON.

These words, so familiar to the reader's ear, are not synonymous. Very few pigs are fit to make good bacon, and in this colony, from past experience, it is evident that there are very few who know how to turn out or manufacture bacon for the market. The only pigs fit to make bacon are hogs and young sows, fully grown, and weighing when killed and cleaned 11 cwt. to 2½ cwt.; all other pigs, whether younger or older, should be turned into pork and not into another process in the under-go altogether. The process of making of manufacture to that of bacon, having the full-grown pigs on hand, let them eat cool dry sties, from two to four in each, taking care that only those pigs that agree remain together; a fighting pig must be shifted to another. We will then commence feeding with boiled or steamed maize and sweet potatoes, pumpkins, &c., twice daily, as much as they can eat, with an allowance of about a quart of soup to each pig daily (butcher's soup is good, but care must be taken not to give too much of it, as it is so strong); as much milk after each meal as they can drink. Remove all the food left, and keep the troughs clean and sweet. Give a drink of clean water at night and in the middle of the day. For the first week the pigs will eat largely but after that time they eat less and less, till at the end of a month the quantity consumed by them will be comparatively small. This feeding is continued until the pigs put on thick fat; they will be by this time quiet, and we can feel their backs with the hand. When fat, commence the process of hardening them, and this is done by feeding them for a few days with cracked oats, oatmeal, or the best substitute you can get, and milk, until the fat of the pig is quite hard to the touch. The pig is then fit for killing, and it is on the last process that the flavor of the bacon depends. Raw food, whether maize, potatoes, or anything else, gives the bacon a strong flavor that no salt or handling can ever get rid of. This is the reason that the Irish bacon has always been the American bacon in price; it is better "finished." The tallow, or strong flavor, so objectionable in American and most colonial bacon is caused by fattening with raw food; and although cooked maize fattens very fast, yet my experience proves to me that we must finish bacon pigs with oats. It is hardly necessary to mention that the pigs while fattening must be kept confined in a very clean place, and kept free from lice and all insects, and have a large yard attached to the sty to run in for half an hour once a day. Having the bacon pigs fat and hard, before killing give them no food for twenty-four hours, and nothing but clean water to drink. To prepare for killing: Erect a gallows with block and tackle; put the hook of the chain or rope round one hind leg of the pig, and haul him up to about 3ft. clear off the ground. You then take his right fore foot in your left hand, steady him, and with your sharp sticking-knife stick him, and let him bleed well. In the meantime prepare a gridiron composed of six bars of iron, or green saplings will do, placed across two banks of timber 18in. from the ground, and wide enough apart to hold the pig lying side by side. Let down the pig by the chain to this gridiron, and when you have the other two or three killed in the same way put straw or dry brush hay or shavings under and over and around the pig, and fire them. Take care that you only put enough to singe the hair off, but that all the hair is thoroughly singed off. Then lift the pig on a table with a raised centre, and scrape all the hair off clean with a scraper or sharp knife, adding plenty of half hot water during the process to assist you. Clean scrape every part of the pig thoroughly. Hang him up and put him in the usual way, and leave the meat to cool till morning. The next process is cutting down, and this must be done by a butcher, as on the cut depends the look of the bacon when it comes to the store; take out the fat; take off the head; then take the tail of the pig in your left hand, and with a sharp knife cut down the centre of the back to the head along one side of the back bone. Then cut down the other side of the back bone clean; then with a sharp chopper cut out the back bone from both sides quite clean; have no jaws or tomahawk work here. Put the sides on a block, take off the feet, remove the shoulder-blade clean, with hand-saw cut the ribs crossway down the middle and break the ribs flat, and we have a side of bacon. With the salt (kept in a 30d dry, sweet place) mix a slight quantity of saltpetre, and handle and rub in the salt mixture every day for eight days; then put the sides on top of one another for four days reverse them for four more days, and the salting ought, if care is taken, to be complete. To make marketable lots, let it hang for two or three days, then put the side on a table, and with a sharp knife trim all shaggy bits off; with a cloth and hot water wash the meat all over, and all salt off; dry it carefully with a dry cloth, dust the sides all over with pea meal or maize meal, and hang them up for forty-eight hours, smoking in a luty out-house made for the purpose. The meat must be kept dry, and the fire kept low enough (pine sawdust is the best) not to cause the slightest heat to reach the bacon. So soon as nicely browned your bacon is ready for the market, and if sweet and carefully turned out is worth a shilling a pound to any store-keeper in the colony. I paid 3s 6d per bushel for maize, and put 1s 2d per lb. for my bacon at Ipswich, and it paid me well.—G. H. in *Queenslander*.

THE DISCIPLINE OF THE NAVY.

Referring to the late terrible explosion on board H.M.S. Thunder, one of the London newspapers says:—

We know at length how that huge ironclad was cleared for action at a signal from the admiral; how the watertight compartments into which the vessel is divided were closed by the men at their stations, and the guns loaded. We learn how, following one broadside, fired at an imaginary enemy, there came a "strong report," and after what followed the ship's company became aware that something was wrong. The men remained, each little party in its own compartment, with the lights all out by reason of the explosion, and the knowledge that whatever had happened they must prepare to die if need be, without opening the partition doors in order to save the ship. One who is at the bottom of the ladder which leads to the battery deck is sent to sound the bells, and as he tries to pass along the deck he finds the main hatchway choked with a torpedo, and filled with smoke and flame, himself and his comrades "like rats in a trap." When eventually he succeeds in his mission the sight which meets his eyes is terrible in the extreme. Men who but a moment before were hale and well lying blackened and disfigured so as not to be recognisable; others are striving to lead away those less injured than themselves; while from some of the dying comes a cry that comrades "who are even worse than they" should be attended to first. There is no uneasy fright manifested. Yet no one quits his post. In the annals of our Navy there is many a brave record, and the tale of how our seamen have done their duty is known in every land; but, from the foundering of the Birkenhead until to-day, has no story been related in which these marvellous qualities have been more plainly set forth than on the occasion of the explosion aboard the Thunder.

POPULATION DENSITY AND RATES OF MORTALITY.

Some curious and interesting results are developed by Dr. Farr, F. R. S., from a study of the rate of mortality in connection with statistics of population density. He finds that the rate of mortality increases as density of population increases, and this he proves by arranging the 612 districts of England and Wales in groups according to the rates of mortality, and showing that all the groups follow this law. Thus in the ten years 1861-70, at one end of the scale the deaths per 1,000 of population are 15, 16 and 17; at the other end, 31, 32, and 33. The rates per capita in the corresponding districts are 12, 14 and 3, and 1.01, 0.51 and 0.1. The intermediate rates of mortality are 18, 19, 20, 21, 22, 23, 24 and 25, while the rates per capita are 4, 3.3, 2.9, 2.1, 1.1, 0.5 and 0.2. Now, excluding the London districts, about which there is some difficulty, we have 7 groups of districts where the mortality ranges thus: 17, 19, 23, 25, 32, and 39. In the same districts the number of persons to a square mile is 166, 183, 379, 1,718, 4,499, 12,351 and 63,823. Thus in Liverpool, the densest and the unhealthiest district in England, there were 63,823 to an acre; of whom 39 per 1,000 died annually. This series of facts may be put in a different way: the nearer people live to each other the shorter their lives are. Thus the proximity of people in 53 districts is 147 yards, the mean duration of life is 51 years; in 345 districts the proximity is 139 yards, and the mean duration of life is 45 years; in 137 districts the proximity is 98 yards, and the mean duration of life is 40 years; in 47 districts the proximity is 46 yards, and the mean duration of life is 35 years; in 9 districts the proximity is 25 yards, and the mean duration of life is 32 years. In Manchester district the proximity is 17 yards, and the mean duration of life is 29 years; in Liverpool district the proximity is 7 yards, and the mean duration of life is 20 years.

A youth from the country, stopping at one of our hotels, sat down to dinner. Upon the bill of fare being handed to him, he said, "I don't care about reading now—he'd wait till after dinner."

Some people are never contented. After having all their limbs broken, their heads smashed, and their brains knocked out, they will actually go to law and try to get further damages.

HOLLOWAY'S OINTMENT AND PILLS.—A certain remedy for disease of the skin, (ringworm, scurf, scrofula, or king's evil, sore heads, and the most inveterate skin diseases to which the human race is subject, cannot be treated with a more safe and speedy remedy than Holloway's Ointment and Pills, which act so peculiarly on the constitution, and so purify the blood that these diseases are eradicated from the system, and a lasting cure is obtained. They are efficacious in the cure of tumours, burns, scalds, glandular swellings, ulcerous wounds, rheumatism, contracted and stiff joints. The cure effected by them is not temporary or apparent only, but complete and permanent.

IMPOUNDING NOTICES.

WANDERARAH, J. Story—Red and white bullock, cock horse, rather wild, 4 or 5 years, piece cut out of lower part of near ear; brindle calf, no brands; red and white heifer calf, no brands; red heifer calf, no brands. To be sold July 2.

WILKINSON, S. George—Red roan and white steer straight horns, anchor brand off rump, with anchor brand off ribs, indistinct brand near ribs. To be sold June 28.

BALDWIN, J. Burden—White steer, red ears, little red on neck, off ear top off, out near ribs, 12 near rump. To be sold June 19.

MELROSE, C. H. Yates—Red cow, white belly, and back, 7s off rump, with other brands, red calf at side, white belly. To be sold June 23.

JAMSTOWN, F. Wreford—Red bullock, no brands. To be sold June 21.

KOOLUNGA, J. Young—Black horse, 10 over y (the x over y conjoined) near shoulder, star, collar on neck. To be sold June 28.

REDHILL, L. R. Wake—Red cow, white belly, off ear split; roan cow, white belly, 3 near rump; yellow and white cow, no brands; white heifer, red spots, no brands; white heifer, yellow spots, no brands; spotted heifer, no brands; roan heifer, no brands; white yearling bull, red neck; yellow cow, 11 off shoulder. To be sold June 23.

He was praising her beautiful hair, and begging for one tiny curl, when her little brother said, "O, my I taint nothin' now. You just ought to have seen how long it hangs down when she hangs it on the side of the table to comb it." Then they laughed, and she called her brother a little angel, and when the young man was going away and heard the boy yelling, he thought the lad was taken suddenly and dangerously ill.

£1 FREE GIFTS!

THE PROPRIETORS OF WOLFE'S AROMATIC SCHIEDAM SCHNAPPS, to induce the destruction and consequent improper use of their wrappers and labels, have enclosed in the wrappers, or under the label on the quart bottles, since 1st October, 1878, and continue to enclose in EVERY DAY'S PACKING THROUGHOUT THE YEAR THREE 1/2 ORDERS, drawn upon the undersigned, who will return bank notes in exchange for them, if posted to their address.

Grateful—Comforting.

M. MOSS & CO., Wynyard lane, Sydney; and 10 Market Buildings, Melbourne.

EPPS'S COCOA.

Breakfast.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which will save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly-nourished frame."—See article in the *Civil Service Gazette*.

Sold only in packets or tins, labelled:—
JAMES EPPS & CO., HOMOEOPATHIC CHEMISTS, London.

U. V. JAEGGI, PRACTICAL WATCHMAKER.

A FEMALE CRUSOE.

The *San Francisco Call* contains an interesting account of an Indian woman who was accidentally abandoned on San Nicolas Island, off the coast of Southern California, and spent 18 years alone there before she was rescued. The fact of her existence was discovered by a man who went from the mainland to hunt for otters, and who found footprints sunk deeply in the ground. He was unable to follow up these indications till nearly three years, when one of a party who accompanied him came suddenly upon the object of their search. She was in a small circular enclosure made of brushwood, about five feet high and six feet in diameter, with a small opening on one side. She was clothed with a garment made of skins of the shag, a species of duck that can neither walk nor fly. This garment reached almost to her ankles when she stood erect. She was sitting cross-legged, skinning seal-blubber with a rude knife made of a piece of hoop-iron driven into a piece of wood. There was no covering on her head except a thick-matted mass of hair, of yellowish brown color, probably owing to exposure to the sun and the weather; it was short, as if the ends had rotted off. There were some wild dogs on the island, a few of

if the ends had rotted off. There were some wild dogs on the island, a few of which kept near her, and seemed to regard her as a mistress. She had lived on a plant resembling cabbage, called by Californians *palo santo*, and a root known by the name of *coreomite*, also blubber of the various kinds of seals, &c. She had a rude apparatus for catching shellfish, and strong fishing-lines made of seal sinews, which seemed to indicate that she fished in the ocean. The expression of her face was pleasing, her features were regular, her complexion much fairer and her form more symmetrical than that of the Indian women on the adjoining mainland. Some suspect that she belonged to a tribe much further North. She could not understand anything said to her in any of the Indian dialects of South California, but she had a wonderful capacity for conversing by signs. She retained all her teeth, but they were worn low—supposed to be due to her chewing tough and hard articles of food. Her age appeared to be fifty years. She bowed to all who came near her, greeting them with a smile. She freely accompanied her discoverers to their vessel, but her conduct at once convinced them that she retained the virtue of female modesty. She showed singular dexterity in

modesty. She showed singular dexterity in making water-vessels from grass and asphaltum—a substance which is plentiful on the island and on the mainland. She seemed to recognise various appliances of civilisation. She died about seven weeks after reaching the mainland, partly from the effects of a fall, partly from dysentery, brought on by eating fruits and vegetables. Padre Gonzalez, the superior of the mission of Santa Barbara, has sent her dress of shag skins and her basket and implements to Rome, to the museum of the Propaganda.
