ESTABLISHED IN 1832.

BRISTOL'S
SARSAPARILLA,

THE GREAT PURIFIER OF THE
BLOOD.

IT STANDS ON ITS OWN WELL-EARNED REPUTATION, gained by a long series of wonderful cures extending over a period of more than 40 years, and which have been performed by it in every section of the globe. In this colony we have the well-authenticated certificates from citizens widely known to the public, on whom the most startling cures have been effected in cases of disease which had until then proved incurable. On these proofs we base our assertion, and on these proofs we invite the sick and afflicted to put their trust, well knowing from long experience that when once perseveringly used, BRISTOL'S SARSAPARILLA will never disappoint those who rely upon it.

"AND WHY IS THIS?"
The reply comes without hesitation, with a full knowledge of its truthfulness. Because BRISTOL'S SARSAPARILLA is the best, because it effects cures which all else has failed to relieve, because it does precisely what is promised for it, because it is a GENUINE PHARMACEUTICAL PREPARATION made according to the ESTABLISHED RULES of the Faculty, because it is prepared by thoroughly educated druggists who understand their business in all its branches, because its action on disease is ALWAYS UNIFORM and RELIABLE, while other so-called SARSAPARILLAS are irregular in their action and unreliable, sometimes seeming to benefit, sometimes acting as a poison, and doing more harm, but as a rule, inflicting action, having no effect whatever. BRISTOL'S SARSAPARILLA is NEVER INFERIOR, and in ninety-nine out of every hundred cases it will either benefit, relieve, or cure.

BRISTOL'S SARSAPARILLA.
For Sale by A. A. KERR, Goulburn, and all Druggists and Storekeepers.

WILCOX & GORR
Trade Mark.
(Machine in use in every household.)

NEW
AUTOMATIC

SILENT SEWING MACHINE.
Awarded the grand "Gold Medal of Progress" of the American Institute, Nov. 1876, and the "Scott's Medal" of the Franklin Institute, Oct. 1876.

No other Sewing Machine in the World has an "AUTOMATIC TENSION," or any other of the characteristic features of this machine.

Correspondence and investigation invited.

THE "NEW AUTOMATIC" SEWING-MACHINE is the latest development in the art of machine-sewing, and is constructed upon the principle of leaving nothing to the judgment of the operator, fulfilling the conditions of a good family-machine "far better than any other sewing-machine in the market." This is the first introduction to the public of a tension device in which there is absolutely no need for regulation. The machine is a marvellous advance upon all other theories, and should be in every family.

KAYE'S
WORMS' PILLS.

THE GOOD OLD ENGLISH REMEDY
FOR ALL DISEASES.

ESTABLISHED OVER FIFTY YEARS.

KNOWN ALL OVER THE WORLD.

FOR upwards of half a century KAYE'S WORMS' PILLS have been esteemed as the best remedy for the prevention and cure of disease. Their use renders the doctor unnecessary in the family.

Acting on the blood, they purify it from all humours, rendering the life-giving fluid healthy in its action, and consequently restoring and establishing the health of the invalid.

These Pills are invaluable to Emigrants, being a certain remedy for all diseases of the Stomach, Lungs, Liver, &c. Are equally adapted for all ages and either sex. Persons residing in the Colonies who cannot have recourse to medical advice will therefore find them indispensable.

The Proprietor has in his possession thousands of testimonials bearing witness to the wonderful efficacy of this invaluable medicine, a selection of which accompanies each box.

Sold by all Chemists and other Dealers in Patent Medicines throughout the world, at 1/4, 2/1, and 4/6 per box.

IMPROVED HOME-SHUTTLE SEWING-MACHINES.

Messrs. M. Moss and Co., Sydney.

GENTLEMEN—Our attention having been called to an advertisement in the Goulburn Herald worded in such a manner as to lead the public to suppose that the "Improved Home-Shuttle Machine" manufactured by us and for which we are the Sole Agents in the Australian colonies, had been superseded by another machine of our make under another name, we beg to inform you that no one has been authorised by us to ADVERTISE IN SUCH A MANNER AND THAT such statements are contrary to facts.

No better Machine is made by us than the "Improved Home-Shuttle," which we supply wholly and solely to your good selves for the Australian market (each machine bearing your name on the steel shuttle-slide); that such machine has not been superseded, but in fact the improvements that have been added from time to time render it a most desirable machine and one that cannot be excelled for quality and cheapness.

Hoping your efforts for an increase of sales on the "Improved Home-Shuttle" Machine will meet with success.

We are, truly yours,
JOHN BROWN, CLARK, AND CO.,
14th November, 1878. New York. 68

SPEDDY **PRINTING.**

THE proprietor of the Goulburn Printing Works begins to intimate that the whole of his types and material has been re-arranged, and with additional machinery lately received from England everything is now as complete as can be desired.

Arrangements have been made by which steam power is now more largely available than heretofore, so that anything like delay in the execution of orders is avoided; and work is now turned out from the Herald office not only as well and as cheaply but also as speedily as from any other office in the colony.

London: Colonial Buildings, Cannon-street, E.C.

EARLY INHABITANTS OF BRITAIN.

Professor W. Boyd Dawkins, F.R.S., delivered on the 6th February a lecture at the London Institution, in which he gave a summary of what has been learnt from pit and cave explorations of the inhabitants of Britain during the latter part of the last stone age.

Enough, he said, was now known of them for some of their characteristics to be traced to the present population. The claims of race have lately been urged in the city of Paulsheim, and we ourselves take pride in recognising an Englishman as an Englishman, whether he is born in Britain, Australia, or America. The history of the English since their invasion of this country in 449 is fairly well known. It took two centuries from their first landing at the Isle of Thanet for them to drive back, district by district, the inhabitants they found here, whom we should call the Welsh or the Iberian people. It was not until 607 the invaders took Chester. His object was to speak of this earlier people turned out by the English. He wished first to mention that the Roman invasion had no more influence, so far as blood was concerned, than the British rule in India at the present time on blood there. The history of our race begins with the age of steel and iron—A.D. 449—civilization of which the term "stone age" is accepted as typical. He had to do with the pre-historic people. Before the stone age there was what is known as the "house age" of civilization, and further back again than that, the "polished-stone" age. It was this polished-stone age of which he had to speak. The habitations of the people of this age are now known to us from the examination of such traces of groups of dwellings as are met with at Cissbury. The people lived in huts which had roofs of turf. Their animals, most probably domesticated, were sheep, goat, ox, pig, and horse, and there is evidence from the bones that the horse was used for food. The fact that the horse has ceased to be an animal for food is due to the ecclesiastical prohibition that it was used sacrificially in connection with the worship of the sun. It came to be not the "correct thing" to eat horse. The dog was used for food as well as for herding and other purposes. In all the sites of old dwellings, broken and cut bones are met with. All the bones show they were large dogs and diminutive pets. Still more can be learnt of the people from their implements. They had pottery made by hand, not turned on a wheel. They struck light from iron pyrites, not from steel, as steel was not invented. They ground corn. The needles found point to the tailors' and dress-makers' art being in a fashion followed. They spun and were apparently, for some of the implements found, could hardly have been used for other purposes. As now, so then, the ear was adorned, and perhaps necklaces were worn. The people too were well armed, and their spears, bows, battle-axes, and stones for slings show that they liked them as much as civilized people do now, to try the effect of weapons of destruction. They were evidently not a nomadic people, for their centres of population were well fortified, and General Lane Fox is of opinion that the work shows as much engineering skill as any fortification works of our own day. The number of strongly-fortified places seems to indicate many tribes who enjoyed warfare. There is evidence from implements found that these people were miners. With all this they were a religious and a superstitious people. Avebury might be called their Westminster Abbey. It was an imposing grand temple, and graves clustered around it; as burying-places are now associated with places of divine worship. The tombs contain such things as the departed might want in his future state, and in and around important tombs have been found relics of funeral feasts or wakes. That there were family vaults is well established, and family peculiarities can be traced in the skulls. Looking at the sum total of what we know of these people, we find in them many of the rudiments of that culture which we now enjoy. Turning to the evidences as to where this people originally came from, the work of archaeologists on the continent has shown that this Iberian or, as he would call it, Welsh race, was widespread over Europe. The small dark Basque of the western Pyrenees showed many features identical with what could be made out of the old people. At fairs in some of the Welsh towns too the Iberian element could be traced in some of the people who came to them from out-of-the-way places. St. Asaph was remarkable in this respect. In Ireland, too, small dark men are to be seen who, if put side by side with the Basque, could not be distinguished as regards type. The English who invaded the old Welsh or Iberians of our islands were, on the contrary, tall, fine people, with light hair and blue eyes, as is known from history. Although these old Welsh were driven to the mountain fastnesses, there can be hardly any doubt that the raven tresses and flashing dark eyes we sometimes encounter in modern English people are traceable to them. We, at any rate, can trace that they enjoyed the basis of a civilization of which ours might be an outcome, except where we can trace other influences.

CALIFORNIA RAISINS.

About four years ago Mr. J. P. Whitney, a gentleman widely known in California in connection with wool-growing and grain-raising on a large scale, began planting vines of the Muscat of Alexandria variety of white grape, with a view to demonstrating that raisins can be made in America of as good a quality as those from abroad. Since that time about 200,000 vines have been planted. As the first result of Mr. Whitney's experiment two car-loads of 20,000 lbs. each of California-made raisins were recently sent east, one car-load coming to New York city and the other going to Boston. The New York Times reports that in 50 cities they have been received with favor, selling equally well with the best imported Malaga raisins, with which they compare favorably as to size, color, skin, stones, and flavor—the latter being the most essential quality. The United States is the greatest raisin-consuming country in the world, and uses annually more raisins than the whole of Europe. The market is mainly supplied from Spain, the raisins known as "Malaga" being considered the best. They come from a comparatively narrow strip of country in the south of

Spain, which has hitherto been regarded as surpassing all other regions for raisins of that character. The annual yield of Malaga grapes averages 2,250,000 boxes of 20 lbs. each. It sometimes reaches 2,500,000 boxes, and last season about 2,000,000 boxes were marketed. Of this enormous yield the United States takes fully one half, on which it pays a duty—as on all other raisins—of 2½ cents per lb.

The American raisins are made from a white grape, the Muscat of Alexandria, to the raising of which the soil and climate of a large portion of California are well adapted. The vine begins to bear somewhat in the second year, although the full bearing capacity is not developed until it is five years old, and continues to bear for about half a century, and sometimes for seventy-five years. In the cultivation of raisin grapes American grape-growers have little to learn from Spain, but in the curing and packing of the raisins a lack of experience is still felt.

The raisins are not cured by any artificial process, however, but in a comparatively simple manner. The grapes are laid on gravel beds and are exposed to the sun for ten or twelve days in August or September, when they are ready for packing, having turned from white to brown, and gradually changed to the familiar dark colour of the raisins of commerce. The white sugar which is generally found attached to the raisins sold in the market is entirely a natural product of the grape, and comes on with age, first appearing as a rule, when the raisins are about two years old. The packing, however, is an operation which requires great care. To properly pack a single 20 lb. box the entire time of one man is needed for a day and a half, so careful is the manipulation of the raisin bunches, while at such much time is required to select and pick over the bunches before packing. Mr. Whitney believes, however, that raisins can be cured in California fully equal to the Malaga or any other raisin.

The chief difficulty with which the California raisin raiser will have to contend in the effort to compete with foreign raisins is the cost of labor. The Spanish vineyardists can get all the laborers they need for from 15 to 25 cents per day, while the California producers must pay at least 1 dollar per day. The very much greater productivity of the soil, however, will do much to offset this disadvantage.

A FEMALE CRUSOE.—The San Francisco Call contains an interesting account of an Indian woman who was accidentally abandoned on San Nicholas Island, off the coast of South California, and spent eighteen years alone there before she was rescued. The fact of her existence was discovered by a man who went from the mainland to hunt for other, and who found footprints sunk deeply in the ground. He was unable to follow up these indications for nearly three years, when one of a party who accompanied him came suddenly upon the object of their search. She was in a small circular enclosure made of brushwood, about five feet high and six feet in diameter, with a small opening on one side. She was clothed with a garment made of skins of the shag, a species of duck that can neither walk nor fly. This garment reached almost to her ankles when she stood erect. She was sitting cross-legged, skinning seal-blubber with a rude knife made of a piece of hoop-iron driven into a piece of wood. There was no covering on her head except a thick mass of hair of yellowish-brown color, probably owing to exposure to the sun and weather; it was, in short, as if the ends had rotted off. There were some wild dogs on the island, a few of which kept near her, and seemed to regard her as a mistress. She had lived on a plant resembling cabbage, called by Californians palo santo, and a root known by the name of cocomete, also blubber of the various kinds of seals, &c. She had a rude apparatus for catching shell-fish, and strong fishing-lines made of seal sinews, which seemed to indicate that she fished in the ocean. The expression of her face was pleasing, her features were regular, her complexion much fairer and her form more symmetrical than that of the Indian women on the adjoining mainland. Some suspect that she belonged to a tribe much further north. She could not understand anything said to her in any of the Indian dialects of South California; but she had a wonderful capacity for conversing by signs. She retained all her teeth, but they were worn low, supposed to be due to her chewing tough and hard articles of food. Her age appeared to be fifty years. She bowed to all who came near her, greeting them with a smile. She accompanied her discoverers to their vessel, but her conduct at once convinced them that she retained the virtue of female modesty. She showed singular dexterity in making water-vessels from grass and asphaltum, a substance which is plentiful both on the island and the mainland. She seemed to recognise the various appliances of civilization. She died about seven weeks after reaching the mainland, partly from dysentery, brought on by eating fruit and vegetables. Padre Gonzalez, the superior of the mission of Santa Barbara, has sent her dress of shag-skins and her baskets and implements to Rome to the Museum of the Propaganda.

LAUGHABLE CONTRASTS ON THE FIRST NIGHT OF A NEW PLAY.—The heroine had married an army officer who, going to the war immediately after the ceremony, had been reported killed. Supposing herself a widow she had married secretly again. Her baby by the second husband (it is of Monday night's performance that I am writing) was brought for her to see. The yearning mother, noted by the stately and beautiful Alice Dunning Langard, caught up the baby and hugged it emotionally. The baby winked its pudgy little face. It was a boy, according to the play, but Mrs. Langard, forgetful of the dilemma, exclaimed, "O she's going to cry." This made the audience laugh, and all the gravity of the scene was destroyed. The author intended that the first husband, not dead after all, should enter at that instant, gaze in wonder and suspicion at his wife and the baby as the former faints, and exclaim, "why does my wife weep?" The husband was Frederick Robinson, an excellent actor, besides being a teacher of dramatic aspirants. He strode into the apartment and nearly lifted himself off his feet with a tragic start at the sight. Mrs. Langard dropped the crying

baby and tumbled gracefully down on her back. Then Robinson did not say "why does my wife weep?" but, by a transposition of parts of the two important words in the sentence, roared out "why does my wife weep?" There was an instant of wondering silence on the part of the audience. "Woe-swine—what did that mean?" The blunder was quickly understood, however, and the declaration by the wife's sister that the baby was hers was lost in a great roar of laughter, instead of bringing down the curtain on a thrilling tableau.—New York Letter to the Boston Herald.

FACT VERSUS FICTION.—The News has been often charged with exaggerating events for effect. In the highest flight of the diseased brain of the editor of this paper he never exceeded the altitude attained by actual fact. In corroboration of this we give herewith a brief record of an accident that happened lately to Mrs. Gilbert Graves of the Rock Killingly. She was descending her cellar-stairs with a tea-kettle of boiling water in her hand when one of the steps gave way. Besides being considerably bruised, the hot water from the tea-kettle spilled over her breast and left side and on her back, scalding her severely. S. W. Franklin, a neighbor, in the house at the time, on hearing the fall and cries of Mrs. Graves, ran quickly on to the stairs, and, not knowing of the broken step, was thrown to the bottom of the stairs and received internal injuries which it is feared are serious. A son of Mrs. Graves, about eleven years old, hurrying to the assistance of his mother, also fell through the stairs and was considerably hurt. The spectacle of these three persons, to say nothing of the tea-kettle, in one heap at the foot of those stairs is certainly one of extreme melancholy.—Danbury News.

£300,000.—£300,000—yes, that is one nice fortune! was the reply which I received from M. Duperré, when I inquired whether the rumour about town was true that he had come into a large property at home (says the Adelaide correspondent of the Melbourne Herald). M. Duperré inherits this immense sum from his wife's father, Major-General Durand, who saw service in India, and was stationed for many years at Madras. The lady's living relatives are also officers of high rank in the British army. M. Duperré, the son of a wealthy French vine-grower, has already lost one fortune of £150,000 owing to the Franco-Prussian war and the reign of the communists, and he came out here about six years ago with only a few hundreds, and has since acted as confidential adviser and managing man to Mr. Hardy of the Banksie Vineyards. Mr. Hardy opened wine-bars in two or three places in town, and M. Duperré and his wife took charge of the principal one in Grenfell-street. Here by their good manners and superior tone they have done much towards keeping the wine-bar business respectable, and have made many friends; and it is needless to say that the number of their friends have not fallen off since their recent slice of good luck. The money has not come into M. Duperré's hands without the lawyers getting a share of it, and he expects that some £30,000 will go to the gentlemen of the long robe. It appears that a male connection endeavored to prove that he was the heir of the major-general's estates, but failed; and now M. Duperré, who speaks English somewhat imperfectly, says: "I shall provide for the young man, because the major-general was one friend of his mother, but he has no claim whatever in law." He continued: "There are relatives among whom I shall divide a large portion of the property, and make them all happy. £100,000 is enough for me, and perhaps I shall come back from Europe and bring some experienced vignerons to make one good vineyard in South Australia, where climate very good for vines." Duperré is an excellent judge of wines, and knows more about vine-growing in a practical way than perhaps anyone else here; so that if he carries his intention into effect it will be a good thing for the colony. He was himself an officer in the French army, and fought in the Crimea, and in almost every action that took place around Paris during the Franco-Prussian war. He received several wounds, but none of a very serious character; but he ran a very narrow escape from his life while the communists were in power. A band of these ruffians visited his house at night and tried to induce him to take service in their cause. He was offered a high rank and a big share of plunder, and when he resolutely declined their proposals they tried to assassinate him. He owes his life to the rapidity with which he drew his revolver and presented it at the head of the leader of the gang, and it was only by his determination to put a bullet through the fellow's brain that he got them to beat a retreat from his hall-door. The moment this was bolted and barred he made his exit by the rear of the premises, knowing that if he remained the reds would return in large numbers and burn him out if they could not get rid of him in any other way. They did return the same night and destroyed his property, but he succeeded in eluding their pursuit. It is possible that Monsieur and Madame Duperré will reside for some time in Victoria, where they have acquaintances.

The following remarks on the Maori census are from the Herald (Dunedin), April 28:—"In nearly all the reports a decrease of population is noted as compared with the numbers shown in the census of 1874. The causes given for this decrease are very numerous. Visitations of typhoid fever, measles, and whooping cough are among the number. Consumption and bronchial affections in general are also deadly enemies. The indulgence in strong drink of an execrable quality is also intimated as a powerful factor in the heavy mortality; and this intemperance is prevalent among the women as well as the men. 'I feel sure,' says the resident magistrate at Hokianga, 'it must be plain to all observers that the native population is slowly, but surely, passing away,' and there is nothing in any of the other reports forwarded to the under-secretary to contradict this statement. The number of males is greatly in excess of females; and the deaths in some of the districts double the births in number, and in one instance quadruple them. The mortality among children is very great in some districts. One officer reports that while some women have as many as six and even ten children, they do

not succeed in rearing one. Mr. A. Mackay, the commissioner for Otago, presents the most favourable view of all the reports. The number of Maori and half-castes have increased to the extent of 494, as compared with the previous census; but then nearly two-thirds of the entire population returned are half-castes. The population (Maori and half-caste) 1874 was 46,016, in 1878 it was 42,810, showing a decrease of 3819."

The Italians are turning their attention to the important question of cheap and easily-employed motive power. As we all know, vast natural forces exist in various parts of the world, which cannot be turned to immediate account because the situation in which they are found is unsuitable for the construction of factories from local conditions, the want of communications, &c. Since the discovery of the dynamo-electrical machine it has been found possible to utilise these resources to a far greater extent than formerly. The machine itself requires some motive power to set it in motion—steam water, or wind—but when once in operation forty per cent. of its force can be transmitted by electrical conductors to a comparatively unlimited distance, and an application of that principle is about to be made in Italy on an extended scale. A river called the Velino rises in the Apennines, above the town of Civita Ducale, and empties into the Nera about four miles above the town of Terni, over a fall 120 metres high, followed by several other smaller ones extending over a distance of 600 metres in length, so that at last the total difference in the level of the two rivers is 180 metres. The Nera itself is a very rapid river, but has no navigable falls. Terni, from its position in a delightful plain and being a point at which communication by rail exists with all parts of the kingdom, is admirably adapted to become the centre of a great commercial and manufacturing community. But as only steam power could be employed there, and the cost of carriage of coal is considerable, its prosperity has been checked. This check, however, seems likely to be done away with. The mass of water that falls from the Velino into the Nera is 40 cubic feet per second, which is equivalent in force to the mechanical minimum of 100,000 horses. An engineer, Signor Vescovali, has obtained from the Italian government a concession for ninety years, by which he is authorised to employ one-fourth of that water, a considerable portion of the remainder being required for purposes of irrigation. His aim is to utilise the natural power of the falls in working dynamo-electrical machines, the force of which can be transmitted by cable or wire to the plain in which Terni stands, so that, in the event of any factory being erected there, the owner will have no need to trouble himself about steam-engines or water-wheels. All he will have to do will be to make arrangements with Signor Vescovali for a cable; and as soon as that is laid down and his machinery erected, he can set the latter to work without any delay or further expense. The proposed system has already been in operation for several years at Friburg, Schaffhausen, and other towns in Switzerland, so there is no reason why it should not work equally well in Italy and elsewhere.—Paris correspondent to S. M. Herald.

The compressed gas system in vogue on the German railroads has been adopted by the English government for lighting buoys. The buoy is filled with gas, the burner at the top is lit, and a light that no shock or drenching by water can extinguish is provided that will burn day and night for thirty-four days. It is thought that with improvements one of those buoys can be made to show a light visible at a distance of four miles for three months, while the application of an electric apparatus extinguishing the lamp at sunrise and relighting it at sunset would give it a working duration of six months.

Two men at Goliad, Texas, had a difficulty. They drew revolvers. One was named Lockhart, the other Robinson. Robinson took aim. Lockhart grasped his pistol arm, and deliberately fired six shots into him. He died. Then Robinson's brother drew his revolver, walked up to Lockhart, and fired six shots into his body. He also died.

When Boyton, the swimmer, emerged from the Allegheny River at Pittsburgh, after his swim of twenty-eight miles in icy water, his fingers were found to be frozen and his face badly frost bitten. His forehead had at one time been frozen white.

General Grant has just been photographed in Paris by the light of the Jablonskoff candle. It is said that this light produces better portraits than sunlight, and as sittings can be given in the evening as well as during the day, it promises to become popular among photographers.

Artificial teeth were manufactured in China centuries before they were produced in Europe. The material used is bone or ivory, and the teeth, having been sawn and filed into proper shape, is fastened to the adjoining teeth by copper wire or catgut string. If two or more teeth are required they are made in one piece, and a hole being drilled through the entire length a double wire is passed through it and looped over the natural tooth at one end and tied to the teeth at the other.

A leader of fashions in San Francisco has had her chairs and sofas, and the cushions of her carriages, stuffed with aromatic herbs in imitation of a practice prevalent among Oriental nations. She lives in an atmosphere of constant perfume.

Hayes Hinman, who recently died at Utica, N. Y., vowed fifty years ago, when a boy of sixteen, that he would never speak again, because his father swore at a member of the family. The reclus was a close student during his years of silence, and kept a record of his thoughts and sensations. He left \$5000 to a nephew, with the advice to keep his mouth shut.

Here is a cat story to match the many told of doggie devotion and sagacity. About two o'clock in the morning the dwelling-house of widow Marcia Robinson, near Hyde Park, Vt., caught fire. The old lady, its only occupant, was asleep, but her favorite cat was awakened by the smoke, and jumping on the old lady's bed, tapped her face with its paw till she was roused in time to escape.

In 1815, the average yield of wheat in France was eleven bushels to the acre, now it is fifteen.

TEETH CAREFULLY EXTRACTED.

STEEDMAN'S SOOTHING
POWDERS,
FOR
CHILDREN CUTTING TEETH.
Caution to Purchasers.

THE value of this well known Family Medicine has been largely tested in all parts of the world and by all grades of society for upwards of FIFTY YEARS. Its well earned extensive sale has induced SPURIOUS IMITATIONS, some of which in OUTWARD APPEARANCE so closely resemble the original as to have deceived many purchasers. The proprietor therefore feels it due to the public to give a special caution against the use of SUCH IMITATIONS.

Purchasers are therefore requested carefully to observe the four following distinctive characteristics without which none are genuine:—
1st.—In every case the words "JOHN STEEDMAN, CHEMIST, WALWORTH, SURREY," are engraved on the Government Stamp affixed to EACH PACKAGE.
2nd.—EACH SINGLE POWDER has directions for the dose, and the words, "John Steedman, Chemist, Walworth, Surrey," printed thereon.
3rd.—The name Steedman is always spelt with two e's.
4th.—The manufacture is carried on solely at Walworth, Surrey.
Sold in packets by all Chemists and Medicine Vendors, at 1/4 and 2/9 each.
Sold by ELLIOTT BROTHERS AND MYERS AND SOLOMON, Sydney. 582

The Liverpool and London and Glob Insurance Company.

THE Goulburn Herald, (ESTABLISHED 1848.)
The oldest journal in the southern districts, has a large and influential circulation, and is engaged in agricultural, pastoral, and mercantile pursuits.

The Goulburn Chronicle, Having obtained a circulation nearly equal to that of the Herald, has been incorporated therewith. The amalgamated paper is printed by steam, and published three times a week.

TUEVA RACES TO COME OFF On Monday, 26th May.

STEWARDS.—J. Hadd, R. Fago, J. Mc Kaurie, D. Totten, W. H. Madew, F. Barnet, D. Bremner.
STARTER.—D. Eldridge.
JUDGES.
SECRETARY AND TREASURER: JAMES M. SIMMONS.

MAIDEN PLATE of 7 sovs., with a sweep of 5/- to go to second horse; for all horses, but none to be advertised race; about 1 mile; weight for age; entrance, 10/6.
TUESDAY HANDICAP of 10 sovs.; about two miles; nomination, 10/; acceptance, 10/; nominations to be sent in to the secretary not later than the 10th instant, together with age, pedigree, and performance.

HACK RACE of 5 sovs.; once round the course, heats; weight, 9 st.; hacks to be approved by the stewards; entrance, 7/6.
CONSOLATION STAKES of 3 sovs. (handicap), for all beaten horses during the day; entrance, 5/.

A. J. C. Rules strictly adhered to as far as practicable.
Three entrances or no race.
Night of general entry, 24th May.
Qualification fee, 10/.
The decision of the stewards to be final.
JAMES M. SIMMONS, Secretary and Treasurer.

"Is there no hope?" the sick man said.
The silent doctor shook his head.
"Why, then, is he so ill?" the sister asked.
"Ah, poor fellow, he is dying."

Dr. L. L. SMITH,
The only legally qualified medical man advertising.

On all affections of the Nervous System no matter from what cause arising
On all broken-down constitutions
On all diseases arising from early indiscretions
On Gout
On Rheumatism.

IN these colonies those enormous evils which we have indulged in "hot youth" tell upon us with fearful interest.

Our regrets are useless, our repentings futile. The sole idea should be the chances we possess of remedying the ill we have done, or combating the effects likely to result. Alas! it is as he may, put on as good an exterior as he can, still is the victim conscious that he is a living lie, and that sooner or later his vice will discover him to the world. Our faith, our obligations to society at large, the welfare of our future offspring, and the duty we owe to ourselves forbid procrastination, and points out to us not to wait till the ravages have done in our constitutions. Before negotiating with a merchant; before engaging with a confidential clerk; before employing a barrister, a careful man makes inquiries as to their standing, their length of occupancy or residence; and in the case of a legal adviser, both as to his legal qualifications and as to his capabilities of transacting the individual business he consults him upon. Strange to say, however, in the selection of a medical man, the sufferer frequently omits these necessary precautions; and without regard to the fitness, qualification, experience, and ability for the particular ailment requiring treatment, he consults the nearest man, whose experience and practice perhaps lie in quite an opposite direction.

Is it astonishing that so many are driven mad, are ruined in health, and are bankrupt in spirits, hope, and money? Have I not for years pointed out to them that I, Dr. L. L. Smith, am the only legally qualified medical man advertising in the colonies? Have I not also for years exposed these various quacks, and exposed the various nostrums they are selling—such as Phosphodyne, Essence of Life, &c.—and had them analysed and found them to consist of "Burnt Sugar and flavoring matter?" and the certificates I have given to be all forgotten. It is for this reason that I, Dr. L. L. Smith, have taken the precaution and advertisement, to give those who require the services of my branch an opportunity of knowing they can consult a legally qualified man, and one moreover who has made this his special study.

Dr. L. L. Smith is the only legally qualified medical man advertising; and he has been in Melbourne twenty years in full practice on

Nervous Diseases.
Loss of Power and Debility
Syphilitic Affections
Want of Condition
Gout and Rheumatism.
Dr. L. L. SMITH can be consulted by letter. Fee, 21. Medicines forwarded to all the colonies.
Dr. L. L. Smith, 182, Collins-street East, (late the residence of the Governor.)
MELBOURNE. 584

"FOR THE BLOOD IS THE LIFE."

CLARKE'S
WORLD FAMED
BLOOD MIXTURE

TRADE-MARK—"BLOOD MIXTURE."
The Great Blood Purifier & Restorer
For cleansing and clearing the blood from all impurities cannot be too highly recommended.

For Scrofula, Bury, Skin Diseases, and sores of all kinds it is a never-failing and permanent cure.
IT CURES OLD SORES.
Cures Ulcerated Sores on the Neck.
Cures Ulcerated Sores on the Legs.
Cures Blackheads, or Pimples on the Face.
Cures Scaly Sores.
Cures Cancerous Ulcers.
Cures Blood and Skin Diseases.
Cures Glandular Swellings.
Clears the Blood from all impure matter.
From whatever cause arising.
As this mixture is pleasant to the taste, and warms the system from anything injurious to the most delicate constitution of either sex, the Proprietor solicits sufferers to give it a trial to test its value. Thousands of testimonials from all parts.

Extraordinary Cure of Skin Disease.
"Crane-street, Chichester, 14th February, 1878.—Sir,—Having been cured by your Blood Mixture of a very painful skin disease, I think it right that you should be informed of the cure for the benefit of others. For the last six months my hands, arms, and face have been in a dreadful state, so much so that the pain kept me from sleeping at night or working by day. I was for six months an out-patient at the infirmary here, and have had the attendance of other medical gentlemen in the town, besides taking and using a great number of medicines, but none did me any good—indeed, in fact I was told at the infirmary that nothing more could be done for me. I was quite down-hearted, and quite despaired of being ever relieved, much less cured, until I was advised by Mr. Gamble, chemist, Chichester, to try your Blood Mixture, and a bottle bought me a large bottle, and before I had finished it, I am thankful to say, I was quite cured, and my health is better now than it has been for years. I remain, Sir, your obedient servant, CAROLINE STARR."
Sold in bottles, 2/6 each, and in Cases, containing six times the quantity, 11/- each—sufficient to effect a permanent cure. For the latest and most complete standing cases BY ALL CHEMISTS AND PATENT MEDICINE VENDORS throughout the world.
Sole Proprietor, F. J. CLARKE, Chemist, 2005 Apothecaries' Hall, Lincoln, England.

Brown Paper—Drapers' Paper.

ON SALE at the Goulburn Book Mart, next the Australian Store, a stock of the above, useful sizes and weights.

The Goulburn Herald, (ESTABLISHED 1848.)

The oldest journal in the southern districts, has a large and influential circulation, and is engaged in agricultural, pastoral, and mercantile pursuits.

A FEMALE CRUSOE.—The San Francisco Call contains an interesting account of an Indian woman who was accidentally abandoned on San Nicholas Island, off the coast of South California, and spent eighteen years alone there before she was rescued. The fact of her existence was discovered by a man who went from the mainland to hunt for other, and who found footprints sunk deeply in the ground. He was unable to follow up these indications for nearly three years, when one of a party who accompanied him came suddenly upon the object of their search. She was in a small circular enclosure made of brushwood, about five feet high and six feet in diameter, with a small opening on one side. She was clothed with a garment made of skins of the shag, a species of duck that can neither walk nor fly. This garment reached almost to her ankles when she stood erect. She was sitting cross-legged, skinning seal-blubber with a rude knife made of a piece of bone.

ing cross-legged, skinning seal-blubber with a rude knife made of a piece of hoop-iron driven into a piece of wood. There was no covering on her head except a thick mass of hair of yellowish-brown color, probably owing to exposure to the sun and weather; it was, in short, as if the ends had rotted off. There were some wild dogs on the island, a few of which kept near her, and seemed to regard her as a mistress. She had lived on a plant resembling cabbage, called by Californians palo santo, and a root known by the name of cocomite, also blubber of the various kinds of seals, &c. She had a rude apparatus for catching shell-fish, and strong fishing-lines made of seal sinews, which seemed to indicate that she fished in the ocean. The expression of her face was pleasing, her features were regular, her complexion much fairer and her form more symmetrical than that of the Indian women on the adjoining mainland. Some suspect that she belonged to a tribe much further north. She could not understand anything said to her in any of the Indian dialects of South California; but she

stated anything said to her in any of the Indian dialects of South California ; but she had a wonderful capacity for conversing by signs. She retained all her teeth, but they were worn low, supposed to be due to her chewing tough and hard articles of food. Her age appeared to be fifty years. She bowed to all who came near her, greeting them with a smile. She accompanied her discoverers to their vessel, but her conduct at once convinced them that she retained the virtue of female modesty. She showed singular dexterity in making water-vessels from grass and asphaltum, a substance which is plentiful both on the island and the mainland. She seemed to recognise the various appliances of civilization. She died about seven weeks after reaching the mainland, partly from dysentery, brought on by eating fruit and vegetables. Padre Gonzalez, the superior of the mission of Santa Barbara, has sent her dress of shag-skins and her baskets and implements to Rome to the Museum of the Propaganda.

LAUGHABLE CONTRIVANCES ON THE FIRST
