**To Proprietors of Iron Build
ings and Houses roofed
with Iron.**

MORAN'S
REFRIGERATING COMPOSITION
HAS now stood the test for five years as the
BEST COOLING AGENT ever applied to
Iron Buildings and Roofing, with its effec
tibility is unquestionable; it prevents Corrosion
Rust, Expansion, and Contraction, thereby preventing
Leakage. Any handy man can lay it on the
iron with the ordinary paint brush, according to
directions supplied.
To Country Customers the COMPOSITION
will be sold in any quantity packed in casks of
50 lbs each. Terms, net cash, 50s per cwt. at
Railway Station, Brisbane.
Please refer to annexed testimonials.
Orders addressed to the undersigned will
receive IMMEDIATE ATTENTION.

Wm. Thompson,
WATFORD STREET,
SOLE AGENT for Warwick.

TESTIMONIALS:
16th January, 1874.
This is to certify that Mr. Moran coated the
roof and walls of our Galvanized Iron Store
with his Refrigerating Composition, which ap
pears to have the desired effect in reducing the
heat inside the building; the iron, even with the
burning sun as now, being perfectly cool, and
we have perfect faith in its durability.
(Signed) BAKER & BARNES & Co.
1st June, 1874.
We had the roofs of our Stores covered with
Mr. Moran's Refrigerating Composition, and un
questionably recommend it as a valuable agent in
reducing the heat inside the buildings. During
the hottest part of the day the iron is perfectly
cool. The effect of this on the Goods and
hardens is considerably.
(Signed) ROBERT ASHMAN & Co.
Creek-street, 16th January, 1873.
Dear Sir,—I have much pleasure in certifying
to the beneficial effect your Patent has on my
roofs, it keeps them cool and steady.
(Signed) J. W. FROST.
Addicks-street, 21st January, 1874.
This is to certify that Mr. Moran has coated
the iron on the roof of my workshops with his
Patent Refrigerating Composition. It has the
desired effect of considerably reducing the heat
of the premises.
(Signed) ROBERT BARNES.

CALEDONIAN STORES. 102

A FEMALE CRUSOE.

The *San Francisco Call* contains an interesting account of an Indian woman who was accidentally abandoned on San Nicolas Island, off the coast of Southern California, and spent 18 years alone there before she was rescued. The fact of her existence was discovered by a man who went from the mainland to hunt for otters, and who found footprints sunk deeply in the ground. He was unable to follow up these indications for nearly three years, when one of a party who accompanied him came suddenly upon the object of their search. She was in a small circular enclosure made of brushwood, about 5 ft. high and 6 ft. in diameter, with a small opening on one side. She was clothed with a garment made of skins of the shag, a species of duck that can neither walk nor fly. The garment reached almost to her ankles when she stood erect. She was sitting cross-legged, skinning seal blubber with a rude knife made of a piece of hoop-iron driven into a piece of wood.

Rude knife made of a piece of hoop-iron driven into a piece of wood. There was no covering on her head, except a thick matted mass of hair, of yellowish brown colour, probably owing to exposure to the sun and the weather; it was short, as if the ends had rotted off. There were some wild dogs on the island, a few of which kept near her, and seemed to regard her as a mistress. She had lived on a plant resembling a cabbage, called the Californian *palo santo*, and a root known by the name of *coronilla* also blubber of the various kind of seals, &c. She had a rude apparatus for catching shellfish, and strong fishing lines made of seals sinews which seemed to indicate that she fished in the ocean. The expression of her face was pleasing, her features were regular, her complexion much fairer and her form more symmetrical than that of the Indian women on the adjoining mainland. Some suspect that she belonged to a tribe much further north. She could understand anything said to her in any of the Indian dialects of South California, but she had a wonderful capacity for conversing

dialects of South California, but she had a wonderful capacity for conversing by signs. She retained all her teeth, but they were worn low, supposed to be due to her chewing tough and hard articles of food. Her age appeared to be 50 years. She bowed to all who came near her, greeting them with a smile. She freely accompanied her discoverers to their vessel, but her conduct at once convinced them that she retained the virtue of female modesty. She showed singular dexterity in making water-vessels from grass asphaltum, a substance which is plentiful both on the island and the mainland. She seemed to recognise various appliances of civilization. She died about seven weeks after reaching the mainland, partly from the effects of a fall, partly from dysentery brought on by eating fruits and vegetables. Padre Gonzalez, the superior of the mission of Santa Barbara, has sent her dress of shag-skins, her basket and implements, to Rome, to the Museum of the Propaganda.
