ICE CREAM PARLOR

In the place where ICES and delicious drinks are served in the most perfect style.

Fresh and complete stock of Candies, Fruits, Cigars, Etc.

We make a Specialty of

Lowney's Fine Chocolates.

"NAME ON EVERY PIECE."
LOWNEY'S
Chocolate Bonbons.

SOME TIME AGO

E. J. FOUNTAIN tied high prices to the tail of a balloon and sent them flying to some other county. Other druggists looked at its departure with sorrow and long faces, but the people smiled with unfeigned pleasure. As is pretty well known, E. J. Fountain keeps the best stock of drugs in the city and sells them, as well as prescriptions, at the lowest prices, while for druggists' sundries, syringes, perfume, soap, brushes, and all druggists' sundries he is simply unapproachable.

HIGH ART SHOES.

That Coulter's is the place to buy your shoes. What lady does not know that the most conspicuous, the most important, and the most attractive part of dress are coat-fitting, artistic shoes. Without such shoes the whole effect of other dress is spoiled. Only at Coulter's can such shoes be had, shoes that attract, impress, and show the wearer's taste. They cost you no more, perhaps less, than even the slip-shod goods some people are seen to wear.

than rifled cannon." The stationery you use may travel the world around crying the story of your carelessness and thoughtlessness. Nice stationery is one mark of good breeding and refinement which even the poorest of us can afford when prices like ours are made.

E. J. FOUNTAIN.

LYNCHED THE NEGRO.

Mob In Mississippi Takes a Prisoner From the Jail.

SHORT WORK MADE OF HIM.

Troops Were Called For but Did Not Reach the Scene in Time—The Negro Was Charged With Murdering a Farmer.

Jackson, Miss., June 25.—The negro, Mosely, who killed Farmer John Strong near Crystal Springs, Miss., a few days ago and who was arrested at that place Thursday and confined in jail, was hanged by a mob there at 9:50 o'clock this morning. The negro had been guarded by 100 armed men since his incarceration and two calls for troops had been sent, but owing to the absence of Governor McRae and the fact that it was impossible to establish communication with Lieutenant Governor Jones, who was at his home in Woodville, troops did not start for the scene until early this morning. When the morning order was received the troops received orders to stop as they were boarding the train, word having been received that the mob had done its work.

Troops Ordered to Go.

Jackson, Miss., June 25.—Lieutenant Governor Jones early this morning wired Adjutant General Henry from Woodville as follows:

"The sheriff of Copiah county is asking for 50 men to guard a prisoner from a mob. Take all necessary steps to comply with the request, if my presence is necessary wire me."

Adjutant General Henry early this morning received another request from Crystal Springs asking that troops be sent and saying guards cannot hold out against the mob much longer. The Capital Light guards of this city left at once on a special train for the scene of disturbance.

Two Attempts at Lynching.

Key West, Fla., June 25.—Two unsuccessful attempts were made here to lynch the negro rapist, Sylvester Johnson, who assaulted Mrs. Atwell Wednesday. During the preliminary examination C. B. Pendleton arose in court and asked the audience if there were not enough whites present to take the negro and hang him. Great excitement ensued, but nothing was done and the negro was safely removed to jail. Later a mob of negroes attempted to kill Pendleton, but the authorities interfered and protected him. Intense excitement prevails and the Island City guard slept at the armory. Threats to raid the armory have been made and serious trouble is feared.

Another Attempted Outrage.

Forney, Tex., June 25.—Telephone messages from Kaufman Thursday announce that another attempt at criminal assault was committed on Mrs. Hampton between this place and Kaufman, very near the place where little Miss McReynolds was assaulted. Excitement is said to be very high in the community where the outrages are occurring. Poses are out from here and Kaufman.

The Injured Child Improving.

Kaufman, Tex., June 25.—The 13-year-old daughter of Mr. T. J. McReynolds, living five miles northwest of here, who was so brutally assaulted early Wednesday morning by an unknown man, is some better, but still in a very critical condition. She had one of her jaw teeth knocked out and her face and body badly bruised. Sheriff Jim P. Keller and the posse have returned to town. Three arrests were made, but each one proved an alibi and was released.

Hanging in West Virginia.

Fayetteville, W. Va., June 25.—Clark Lewis was hanged here at noon today before a large and orderly crowd. The condemned man sang on the scaffold. Lewis was hanged for the murder of Charles Gibson, whose death appeared to be desired by Mrs. Gibson to enable her to continue uninterrupted her carousal with Lewis and one or two others. They were jointly convicted with Lewis.

James Pollard Hanged.

St. Joseph, Mo., June 25.—James Pollard, colored, was hanged in the jail yard here this morning for the murder of Joseph Irwin, also colored.

Awarded Damages.

Colmesneil, Tex., June 25.—In the district court at Woodville Miss Allie O'Brien was awarded \$10,000 damages against the Trinity and Sabine railroad for alleged injuries received by her at Corrigan nearly 18 months ago.

Dined the Poor.

London, June 25.—The Princes of Wales' jubilee dinner to the poor yesterday were very successful. About 2000 denizens of the slums were sumptuously entertained at the various centers.

Did Not Make the Offer.

New York, June 25.—Marcus Daly, the well known horseman, who is in the city, denies that he has made an offer for Galtree Moore, the winner of the English derby.

A FAVORABLE IMPRESSION.

McKinley Looked Upon With Favor by the English People.

New York, June 25.—A dispatch to the Tribune from London says the favorable impression produced in England by President McKinley's action in appointing a special embassy for the historic occasion of the queen's jubilee is emphasized by the distinction with which it has been received at court and in the highest circles. All the members of the special embassy shared in the exceptional honors and attentions paid them as representatives of the United States. Royalty has set the style, and every reference to America in the public press is sympathetic and appreciative. The fact is generally recognized that America has departed from her usual, half hearted methods of diplomatic intercourse with foreign nations, and taken her place with dignity and distinction in the world's court of honor opened in London for the purpose of congratulating the queen and her empire on her long and prosperous reign.

Good feeling has been promoted by this exceptional demonstration of American courtesy and appreciation and the way may have been opened for the adjustment of several questions vitally affecting the United States. For example, the three silver envoys, with Senator Walcott at their head will arrive in London next week after entering upon their work in Paris under the most favorable circumstances. Their main object is to interest the leading European powers in the question of bimetalism, and to secure their consent to reassembling the monetary conference. The French government favors this project and Germany only awaits the action of England in order to fall into line. The house of commons has passed an academic resolution in favor of bimetalism, but the ministers are divided on the subject. Mr. Balfour is a convinced bimetalist and several of his colleagues are of the same mind. Lord Salisbury himself is known to share Mr. Balfour's views, although he is more cautious and moderate in expressing them. Mr. Chamberlain and others are on the fence, and there is only one pronounced monometalist with convictions unclouded by doubt. This is the chancellor of the exchequer, with financial London behind him. The important fact which is understood in the best circles of information is that the ministers, while unable to agree upon any other point, will undoubtedly consent to send delegates to a new international conference. This may be stated with the utmost positiveness. The delegates, moreover, will not be hidden from monometalist while convinced in advance that nothing can be done for it, but open minded men are ready to discuss the complex question in all its bearings. The reopening of the Indian mints is also probable.

Senator Walcott and his colleagues in pressing their argument here for fresh international action will have many influences in their favor and one of the strongest will be the good feeling produced by American hearty participation in the jubilee celebration. Ex-Secretary Foster will also arrive next week from St. Petersburg where he is reported to have met with considerable success in negotiating with the czar's movement in relation to the pelagic seal fisheries. His reappearance in London will be premature since he cannot reasonably hope to secure the reopening of the seal fisheries question this year, and especially when he has sent to the foreign office a needlessly aggressive presentation of the case.

Other questions are unsettled between England and America and the exchange of good offices and jubilee congratulations over the event in which the queen's subjects are profoundly interested can hardly fail to be helpful in securing a satisfactory acknowledgment of them.

The Race at Poughkeepsie.

Poughkeepsie, N. Y., June 25.—Unusually day opened gray and hazy—a dead south wind with indications of showers. Chances are considered about even for each crew. For the first place the Harvard eight was a slight favorite, and Cornell men were anxious to bet that their crew would beat Yale. Cuxwain O'Connell said the Cornell contingent were willing to bet that in the race the record made by Cornell last year would have to be broken. Their record was 15 minutes and 29 seconds for four miles. Lehman at Harvard quarters made almost the same kind of statement, saying he believed all three crews would be record breakers.

There was little betting aside from private wagers. Bookmakers offered 12 to 16 against Harvard and went without takers.

The Bedford Shooting.

Port Worth, Tex., June 25.—An affidavit has been lodged, charging Dave Allison with assault with intent to murder his son-in-law, Wm. M. Gully, three miles south of Bedford, this county. Allison, it is alleged, shot at Gully four times with a .35 caliber, two shots missing, one passing through the body from the right and the other through the thigh. Gully was alive, but accounts, still his wounds are pronounced decidedly dangerous. Allison has not as yet

CROWDS AT NASHVILLE

The Biggest Day in the History of the Tennessee Capital.

THE PARADE OF VETERANS.

It Is Estimated That One Hundred Thousand People Witnessed the March of Old Confederate Soldiers—Love Feast Held.

Nashville, June 25.—Despite the heavy downpour of rain at noon, which prevented thousands who had been waiting for Confederate day to attend the exposition from going, there were all yesterday throngs in every building; throngs passing to and fro and other throngs constantly coming. Attendance during the week has been very great. Wednesday 30,000; Tuesday 20,000, and yesterday fully 25,000 despite the rain.

The afternoon was bright and clear until late and all portions of the immense grounds showed the heavy influx of visitors. Old soldiers of 35 years ago witnessed the evolutions of the soldiers of the present day, now occupying the military encampment and brass bands playing inspiring airs added to the general enjoyment. The woman's building was thronged with prominent men and women from other states and really a constant and brilliant reception was in progress.

Crowds everywhere, crowds in houses, on house tops, blocking sidewalks and filling to overflowing every available space along the line of march, awaited the order for the grand parade, the closing event of the Confederate reunion. One hundred thousand people had collected to see a parade consisting of 18,000 people on horseback, on foot and in carriages marching to the music of brass bands, drums and fifes, music which years ago typified fierce war. Never in the history of Nashville has there been such an outpouring, never such a procession and on the faces of the lookers-on and of some of the best figures stepping briskly and proudly could be seen the suggestion that never would again there be seen such another parade.

Promptly the parade started, police on horseback clearing the way and from start to finish the best of order prevailed. All vehicles were kept on the streets not included in the line of march and the street cars stopped running. The parade was cheerfully accorded the full right of way. From the starting point, the customhouse, through the center of the city, around the public square, out Broad street to Vanderbilt university, where the parade broke ranks, a dense mass of enthusiastic cheering people greeted the old soldiers, their generals and the beautiful women who took part. The citizens of Nashville were both welcoming and speeding their departing guests and they did it with wholehearted cordiality inspiring to witness.

From the dismissal of the participants in the parade until late in the evening the tide of travel was to the exposition. Men, women and children hastened during the afternoon to the auditorium to attend the final exercises of the United Confederate Veterans, the love feast and the flow of oratory interspersed with southern melodies and martial music of the days gone by. Each state was represented in the jubilee by delegates, their friends and a speaker, selected for the occasion. The speeches were short, but in variety were most excellent, suited to the occasion and were received with rounds of applause.

Mormon Elders Made in Love.

Meridian, Miss., June 25.—Elders Rydaleh, Pomeroy, Parish and Jones, four mormon elders from Utah, were run out of this town. The elders have been in this city several days arranging for meetings and Thursday began a house to house canvass for the purpose of securing converts. This invasion of private residences so aroused the people that a large crowd gathered at the artesian well and when they attempted to hold services the elders were politely but firmly notified by a committee of citizens headed by Honorable John W. Fowell, that the people would not allow the privacy of their homes to be thus invaded and that the elders must leave town. They left on the first train.

Shot a Negro.

Kaufman, Tex., June 25.—A negro went into the yard of Will Hampton, living two miles south of here, and on Mrs. Hampton asking him what he wanted, he replied that it was "none of her d—n business" what he wanted. At this juncture Mrs. Hampton turned loose a sixshooter on him; shooting at him twice, and he made for the woods. The officers and dogs were soon in hot pursuit, but his capture has not been reported.

Assessed Valuation Reduced.

Guthrie, Ok., June 25.—The territorial board of equalization has completed its labors, having raised the assessed valuation of most of the counties in the territory, the aggregate raise for the entire territory being \$22,000,000. As the raise is a general horizontal one, raising the value of money, securities, stocks, bank deposits, etc., along with real estate, it will be contested in the courts from every county.

GOLGOTHA OF PACIFIC

AN ISLAND COVERED WITH OLD HUMAN BONES.

Extinct Race of Terrible Giants—Captured of the sole survivor of the Ancient Race that Inhabited San Nicolas Island.

(Santa Barbara Letter.)

THE Channel Islands have long been known among the old time residents of California as the Golgotha of the Pacific, for somewhere else in the world are there probably as many human bones and skeletons lying exposed to the elements as there.

These islands have been objects of romantic legends, curiosity and mystery for generations or more. Notwithstanding that they are 28 miles off the California shore, they are solitary and unpopulated.

As far back as the memory of any person in South California runs, hundreds of white skeletons have dotted the valleys and hillsides of San Nicolas Island, one of the group. Strange stories of serpentine sandstone, and skeletons are found there among the human bones, and the island and its inhabitants have a history so curious that it is difficult of comprehension.

In 1835 the Franciscan padre in the Santa Barbara mission, learning that there were but 16 of the strange Indians then living, determined to rescue them from the island. They went over in a sloop and succeeded, as they thought, in getting all on board. At the last moment an Indian woman returned for her child, and remained. Sixteen years later Capt. George Nidever and two men went from the coast in a sloop to hunt sea otters off San Nicolas. On landing they, like Crusoe, were astonished to discover human footprints in the sand. They saw no one, however, and a storm compelled them to put to sea. It was two years later that the captain, revolving in his mind the sight of the footprints in the

CAPTURE OF THE WILD WOMAN.

uncanny island, determined to go and discover and bring over the lonely woman of whom he had vaguely heard. Men accompanied him, and at length they saw on the surf beaten shore a woman with long, tawny hair, dressed in a queer garb of colored bird skins, and scraping with a bone knife the blubber from a seal. They surrounded and approached her stealthily. Although suddenly confronted, she did not appear to be in the least afraid, but smiled, and then falling on her knees, prayed to the sun. She offered no objection when, by signs, she was made to understand that she was to go with them in the boat.

They searched Santa Barbara across the rough sea, and the first thing the Indian woman saw was Dr. S. L. Shaw, who is still living at the age of 80 years, riding a horse. She had never seen a spectacle like it, and thought the men and horse were one, and she knelt on the shore and offered her devotions to it. Two weeks afterward the last inhabitant of rock ribbed, tempest beaten San Nicolas died from eating food to which she was unaccustomed, and the curtain fell on her race forever. The woman, known as the "Lone Woman of San Nicolas," has been the subject of a score of romances and poems and food for a lot of philosophy of the coast.

San Nicolas is ten miles wide and four miles across at the widest point. Nothing more desolate than the general appearance of the island can be imagined. As far as the eye can trace there are barren levels, with innumerable circular depressions, showing where primitive dwellings once stood. Not a vestige remains of the materials used in the construction of these rancherias. Hundreds of shell mounds are scattered about, and are found to consist of astonishing numbers of mollusks, the bones of every species of fish found in the channel, skeletons of seals, sea elephants, sea otters, whales, the island fox and various aquatic birds. Without question these animals were used for food by the tribes that once thronged the island. There are numbers of canine skeletons, several of which indicate a species of bull terrier.

An examination of some of the mounds discloses all sorts of curious utensils, stone cooking pots, water dippers, mortars, pestles, drills, bone needles, and fish hooks, shell beads, charm stones, pipes, cups, and a few arrow heads, spear points, and swords made of bone. The absence of many weapons proves the peaceful attributes of the islanders. Small imitations of boats and fishes carved from crystallized talc and serpentine also show a rudimentary knowledge of the art of sculpture. No trace is seen of the brush pens, in which the lone woman of San Nicolas for years found her only shelter from the cutting wind and sand. Every foot of this strange island is eloquent of the extinction of an almost unheard-of people.

The strangest of all the sights on this island is to be seen on the broad plateau south of the Chinese camp at Coral Harbor. Here acres of the sand are littered with thousands of disjointed skeletons. Measurements have been made by several scientists of the thigh, leg and arm bones, and literally bushels of skulls and other parts of the human frame have been brought to Los

Angeles from San Nicolas Island for investigation. The general opinion is that the physique of the Indian race that swarmed over the island then was very much larger than that of any civilized race of today, and that some of them must have been seven feet three inches tall. The skulls of this extinct tribe often measure several inches more than some of the skulls of today. Many skulls found lying about on the island show that their possessors must have suffered death from a club or blunt battle ax. No one has yet found a skull on San Nicolas that shows marks of a bullet.

THE BIGGEST BELL.

A Burmese Bell, Weighing Ninety-Eight Tons, Has Just Been Raised.

For some time past there has been a sort of dead heat between the two biggest bells in the world, the one at the cathedral in Moscow, and the other at the unfinished pagoda of Mengoon, a little north of Mandalay, across the river. If the former was the bigger of the two, it was cracked, and therefore useless as a bell, while the other, though whole, had dragged its supports down till it rested on the ground, and would not emit any sound. Now, however, it has been reawakened, and can claim attention as the biggest bell in working order in the world. It averages over a foot in thickness. The bell itself is over twelve feet high, and the shackle, which was intended for logs of timber, about twelve feet. The pin of the shackle has a diameter of sixteen inches. The bell was cast about the beginning of the century by King Bodaw-paya as an accompaniment to the huge brick pagoda which he never finished. It is said to have been cast on an island and rafted across. No proper means yet exist for striking the bell, but when hit with a heavy piece of wood gives a deep, vibrating boom. The figure in front of the bell in the photograph is that of a Burmese nun.

A PETROLEUM WELL.

A Powerful Explosive Forces Out a Torrent of Oil.

Among the impressive oil region spectacles the shooting of an oil well always takes front rank. The well that

WHEN THE TORPEDO EXPLODES.

is to be shot has been drilled to the oil producing strata of sand rock, and there the oily fluid is held in the pores of the rocky formation. In some instances the gas pressure is sufficient to blow the oil into the hole drilled in the rock, and no other means is required to get the oil to the top of the ground. This is only in exceptional cases. The general way is to lower a long torpedo so as to pass inside of the casing, down to the bottom of the hole. The torpedo is a tin can of probably 10 feet in length. Inside the can the space is filled with nitro-glycerine. A percussion cap on the top of the can is so arranged that the dropping of a weight or go-devil causes the device to explode. The rock is rent over the bottom of the well, and a basin is formed which becomes a reservoir to pump from when the well is ready for that part of the business. The cut shows the torrent of oil that rushes

WHEN THE TORPEDO EXPLODES.

from the subterranean depths when the torpedo or "shot" is exploded.

Pigmies of the Congo.

The pigmies of the Congo, of whom so much has been heard in recent years, are nomads and hunters, and dangerous, since they make themselves invisible in the thick forest, and their weapons are tipped with deadly poison. An elephant grazed by a poisoned spear falls dead under a hundred yards. And their expertness with tiny bows and arrows rivals the achievements of quick firing guns, as they can shoot three, or even four arrows so rapidly that the last is discharged before the first reaches its mark. Ordinary guns are little good against them, since on seeing the flash of the firing gun they drop, and, running in, hidden by the grass, spear their opponent while he is in the act of reloading. But broadswordsmen were too much for them. "Many of us," writes a recent explorer, "were, however, spared by the seemingly magical appearance of these gnomes-like beings within three or four yards of us, with their murderous little spears pointed for our destruction. And indeed, their success was often extraordinary enough to make one almost doubt their being human."

A Question of Color. She—What is the fashionable color for young ladies? He—I prefer ones.

CLOTHES OF THUGS.

QUEER FAD OF A WEALTHY LONDON CLUBMAN.

Is Middle-aged and Not Eccentric—On Each Murder's Anniversary He Does Clothes and Visits the Scene of Tragedy.

LONDON possesses a "Jack the Ripper" of whom it is proud. This man is Mr. Howard Denver of Weymouth street, member of the prominent London club and of an excellent family. He is wealthy, belongs to the leisure classes and is unmarried. To his friends he is known as "Jack the Ripper, Jr.," says the Philadelphia Inquirer.

This man earned his title by purchasing from every source where they could by any amount of effort be obtained the suits of criminals—the trousers, the coat, the shoes, the hat which the murderer wore when he committed the deed. These suits are in demand by the collectors of odd things, and often Mr. Denver has had to pay heavily for a suit, but in the end he has outdistanced his competitors, except in one or two famous instances.

A suit worn by the original "Jack the Ripper" when he murdered a girl in Whitechapel without disfiguring her features was hidden over his head by another enthusiastic London collector. This greatly worried Mr. Denver, but he rallied and outbid his rival when the next chance occurred.

Suits of murderers' clothing are not advertised, so one wonders how a collector can obtain them. To get possession he must work harder than most collectors, for his prize is not offered for sale in any public way. He must watch for it, see it, grab it and possession becomes ten points of law.

Once when the case was on trial of a German butcher who murdered his wife Mr. Denver haunted the courtroom night and day. When the clothing was produced in evidence it was horribly stained.

The evidence was so convincing that all knew the verdict would be "guilty." Mr. Denver realized that as soon as the prisoner was found guilty he would be removed and the clothing thrown away, as having done its work. To be on hand, therefore, at the right moment was an absolute necessity.

Sure enough the verdict went for the crown and the prison warden ordered the old clothes thrown away. They were consigned to an ash heap for transportation to the city dumping place. This was a rare chance for the collector of criminal wardrobe. Straining into the area where the ash-cans were kept, he deftly fished out the clothing, getting the suit entire, even to the undershirt—and all for nothing. That is the only suit in his collection that did not cost him a penny. The keepers of the prison were not clever enough to realize their chance to make an honest bit of fortune.

A fad is of but little use if you cannot put it to some practical test occasionally. Mr. Denver enjoys his to the utmost, for it is a source of never-ending amusement to him in a certain way. Being a gentleman of leisure, time hangs heavily on his hands, or would hang heavily were it not for this fad and his delightful way of putting it to good account.

In a ledger which he keeps in his bachelor apartments there is a page giving the date of the murders that were committed. Opposite the date is a description of the suit of clothes the murderer wore. Below follow an account of the murder and the steps the guilty man took that day.

As the anniversaries come around Mr. Denver dresses himself in the suit indicated in the book and marches out to "repeat the murder." He first goes to the clubs, for he belongs to every club of prominence in London, and greets his friends.

They look him over and applaud or turn away in horror, according as the fad strikes them. A bottle of wine follows. Then, stimulated by his refreshment, the "Ripper, Jr." goes out to Whitechapel, or any other spot where the murder was committed, and walks over the haunted path. His routes lie mostly in the poorer parts of London, but sometimes they take him down Piccadilly or along the Strand.

He is unabashed, however, no matter what his guise and plods merrily along, often followed by a crowd of curious hoodlums. If the clothing is very disreputable, if only slightly blood-stained and not torn it passes in the crowd unnoticed. No one meeting this quiet, well-conducted though badly dressed man would realize that he was a faddist of the most pronounced type.

Mr. Denver's companion upon all his rambles is a coil of intelligent conscience. This dog is at once a companion and a protector. Often in the midnight excursions of his master—for the hour of the murder is closely observed—the collie has had all he could do to protect his master. Through the lower parts of London he has gone with him at hours when no well-meaning man can afford to be abroad, and in quarters where each new face is viewed with suspicion.

Mr. Denver is no longer a young man. He has reached an age when a fad becomes a grand passion; and the desire for collecting the paraphernalia is strong upon him. He owns ninety suits, and ninety times a year goes out dressed in his old rags. More murders were committed in winter than in summer—three to one—and on a certain day every February this self-designated murderer is obliged to make six changes within twenty-four hours in order to celebrate all the anniversaries.

Irreconcilable Differences. Alice—Why did she refuse him—because they were of different faiths? Clara—Yes, Alice—And he refused to change his religion? Clara—Oh, no; his wheel.—Judge.

A Question of Color. She—What is the fashionable color for young ladies? He—I prefer ones.

THIS MAN EATS IN LATIN.

Western Lawyer Is Responsible for the Incipient Fiasco of a Waiter.

A western lawyer went into the "Planters" cafe a few days ago, says the St. Louis Republic. He had not always lived in the far west, and in his college days in the east was well enough acquainted with the French bills of fare. A swell New York restaurant, but out in his new home he had forgotten about soup au pot gras and pomme de terre a la duchesse. The fact that he could not read some of the delicacies on the menu exasperated him, and he proceeded to have fun with the waiter.

"Nothing here that I'd care for," said he to the claw-hammered attendant. "We can serve you anything for dinner, sir," said the waiter, confident that he could please his customer before he got through with him.

"Have you any sine qua non?" The waiter stared. "No-o-o, sir," he answered. "What about bon mots? Have you any?"

"No, sir."

"Then let me have some nice ignominious. That's good all this time of the year."

"We haven't got any." "Bring me some tempus fugit, then!" "That's out, too, sir."

"You must have E pluribus unum!" This time the waiter looked bright. "I've heard them speak about it in the kitchen. I'll go and see!"

He came back empty handed and dejected. "We haven't got it," he stammered.

"Strange that I can't get any of these reasonable things. Try once more, and find out if they haven't pro bono publico."

"I'll call Mr. Weaver," said the waiter, almost crazy by this time. "Perhaps he can tell what you want."

The guest from the west caught him by the coat tails.

"All right," said he, "and in the meantime bring me some roast beef and fried potatoes."

"We have it," yelled the waiter in his delight at hearing of something that was obtainable, and he flew off to the kitchen and came back with the beef and the potatoes and Landlord Weaver in the wake.

The attorney and the hotel man had a good laugh at the expense of the unfortunate waiter, who confided to the chef in the kitchen that he struck a man who must have been eating at Delmonico's all his life.

Logan and McCook.

Johnnie Logan is a nice young man, of dudish proclivities, possessing a handsome face, a swarthy complexion, a proper figure and a rich wife. He is a brother-in-law by marriage of Col. Leslie Bruce, their wives being daughters of the Pittsburgh iron founder, the great Andrews. Johnnie's name was Manning when he was an infant, but his mother changed it to John Alexander to commemorate his father's gallantry at Vicksburg and Stone Mountain. Johnnie has been a breeder of racehorses, a driver of four-in-hands, a racer of thoroughbreds, the "Prince of Youngsters," and an embryonic politician. He breathed the air that the car breathed at Moscow, and lingered on the spot where fell the snow that was trodden by the feet and defeat of Napoleon. He wore on that historic occasion a uniform, and now wants to destroy the remnant of the clan "Fighting McCooks." Inasmuch as Johnnie was not officially accredited to the czar, I shouldn't think it made any difference what kind of uniform he wore.

Duchess and Queen.

Our little Duchess of Marlborough has been a guest of the queen. Good! The dispatches from London say: "Eighteen months ago Consuelo Vanderbilt was a plain American girl. Not so! She never was 'plain.' Consuelo was distinguished at the age of 19 and, as Miss Vanderbilt, was regarded as a queenly young woman. And why should she not dine with the queen? Where is the wonder?"

Never Full.

"Yes, sir," said the sallow man proudly. "I can truthfully say I was never intoxicated in my life." "Well, huh," remarked Col. Kaintuck, after a pause, "that strikes me as a very empty honor."—Cleveland Plain Dealer.

Not a Welcome Topic.

She—It was just three years ago tonight that you proposed. He—Now what did you want to bring that up for on the only night of the week that I have away from business?—Indianapolis Journal.

LATE FASHION NOTES.

A popular ribbon for summer gowns is a moire antique ribbon with satin backs in the widths known as 50 and 54.

Pinkish violet sunshades are going to be very popular, as they cast a most becoming tint on the owner's complexion.

Louisiana is without doubt the foremost summer silk. It trims up beautifully with mousseline, moire ribbon, and Valenciennes lace.

Fave, or pavement gray, is the very newest of the new tints of this popular color. It is not so becoming as a hint of rose, cream, nor fawn in the shade. The craze for violet, mauve and all the shades of purple has extended to the corsets and yards of violet silk and satin, either plain or flowered, are made up in this important article of dress.

Broad effects across the shoulders and a small waist are the two things considered very desirable in a gown, but the prevailing style this season seems to be a slightly pinched front cut like a plastron to show an underbody of lace or chiffon.

Notwithstanding the expense of the materials and trimmings in vogue, the clever woman of moderate means (and she is always with us) can, by the aid of a few smart, detachable accessories, and the use of a few nobby blouses and

cozy waists, look as cool and attractive throughout the summer as she of resources, and, perhaps, less

SCIENTIFIC POINTERS.

CURRENT NOTES OF DISCOVERY AND INVENTION.

Making Bricks from Sand—Tree Grows in a Tomb—A Balloon Life Boat Has Lately Been Invented—Testing Cement.

Bricks from Sand.

Y a new process, bricks are to be made from sand. The materials, which are mainly powdered stone and sand, are held together by a preparation which acts as a bond during the annealing process, which is conducted under a very high temperature. Various advantages are claimed for these new bricks. They are much stronger, having a crushing strength of as high as forty-five thousand pounds to the square inch, a cost of about three-fifths of ordinary brick, much less time required in their manufacture, and a great reduction in the quantity of fuel needed in their burning. With these advantages, there are likely to be brick yards springing up wherever there is a demand for first class building materials that can be furnished at a reasonable price. Brick and stone houses are by many persons liked better than wood; but brick and stone are more expensive, and, therefore, out of the reach of the many who would prefer them. If sand can be made into bricks a great building problem is solved in a manner eminently satisfactory.

Tree Grows from a Tomb.

The little parish of Kempsey is one of the most picturesque in England. It is situated on the banks of the Severn, about four miles from Worcester. Its proudest feature is the little church which has been standing nobody knows how long, but which was carefully restored in 1865. Its second lease of life, therefore, dates back earlier than the birth of many a venerated sanctuary. In this church there is a monument, built of solid stone and curiously carved, erected to the memory of Sir Edmund Wyde, who died in 1629, at the age of 22. The recumbent figure of the knight lies under a stone canopy, supported by two small fluted pillars. His hands are folded on his breast.

Balloon Lifeboats.

An ingenious combination of balloon and lifeboat has been invented. It promises to rob shipwrecks of the future of their terrors. The buoyancy of a balloon, it is believed, will render a boat even in the most severe storms absolutely unsinkable. The balloon lifeboats have been tested in the presence of naval experts with very gratifying results. It was found that a boat, even when filled with water to the gunwales, was prevented by the immense lifting power of the balloon from either sinking or upsetting.

It requires much less buoyancy to support a body than is commonly supposed. A quart of air, or about as much as a tomato can hold, is sufficient to keep a heavy body above the surface of the water. A small balloon will, therefore, be powerful enough to float a boat easily, no matter how crowded or waterlogged she may be.

The new balloon lifeboat is constructed with cylinders filled with compressed air. These are carried in compartments of the lifeboat, and are used to inflate the balloon. The balloon is harnessed by cords to the boat, and joined to the air tanks by flexible connections. This makes it possible to inflate the balloon from the boat at an instant's notice. The supply of air is, therefore, always available, no matter what may be the condition of other parts of the ship.

One of the most important advantages urged for the new boat is that with the balloon connection sails or oars will not be necessary. The balloon will obviously act as a great sail, and this motive power will be strong enough, no matter how overcrowded the boat may be. Still another advantage is the fact that the balloon will set as a great signal, and will be plainly visible for many miles.

Wells as Barometers.

Facts were presented at a recent meeting of the Science club of the university of Wisconsin which tend to show that the surface of the ground water in a well is much more responsive to atmospheric changes than is the barometer; and in stormy weather, according to Prof. F. H. King, "the movements of the water surface are so complex and so short a period that a rapidly moving chronograph is required to separate them." So, too, the rate of discharge of water from springs changes very greatly with variations in the pressure of the atmosphere. These facts suggest the scientific reasons for the use, which has sometimes been made in popular weather lore, of springs and wells in predicting storms.

Aluminum in the Arts.

The use of aluminum in the arts does not grow in proportion to the reduction in the cost of the material. A few years ago the price of the metal was from \$10 to \$15 a pound. It is now sold at from 21 to 22 cents a pound. At that price it is now cheaper than copper or brass for the same purpose, because for a given strength the weight is much less. The consumption of these metals in 1896 was: Copper, 156,000 tons; brass, 60,000 tons; aluminum, 650 tons. The producers of aluminum in order to make a market for the metal have been obliged to discover nearly all of its uses, invent methods of handling it, and build the works for turning out the finished product. Thus far it has nearly displaced nickel in the arts, and it bids fair to eventually displace brass for most purposes, except where exposed to a heat of over 300 degrees. It is largely used for cooking utensils, and keeps bright. It is used in laboratories, and for the handles of surgical instruments, not only for its lightness,

but because it is not affected by the antiseptics used. It is coming rapidly into use for bicycle parts. Dentists use it for plates for false teeth, and it has been used to replace a broken jaw. One of its latest uses is for lithographic plates instead of stones, cheapening the process. In electrical apparatus it is useful on account of its non-magnetic quality. In Europe it is being used to reduce the weight of military accoutrements, canteens, buttons, belt plates and the like being made of it. The anticipated output in 1896 is 2,000 tons, and in 1900, 10,000 tons.

Testing Cement.

The Boston School of Technology is becoming noted for its valuable researches in the line of testing the tensile strength of various articles. One of the latest tests is that of cement, which is performed by a machine constructed expressly for this purpose. The cement which undergoes the test is prepared and put into moulds, which give a casting one inch square. The ends of this casting are so arranged that they fit into sockets, the attachments being fixed to gearing and screws by means of which the pull is made. Time and strength have much to do with the breakage. The power is supplied gradually, and at the rate of 400 pounds per minute. The pull or weight is applied by a wheel, which runs along the weighing beam, and is connected to a small slide running along an upper beam, which is fixed. The scale of weights on this beam shows the amount of power which is brought to bear. One of the features of this machine is the smoothness and ease with which it is controlled. The weight can be shifted without any perceptible jar of the machinery.

The Kaiser's 25,376 Head of Game.

All the princes of the world are addicted to hunting, and few have been more successful in their day than the present Kaiser of Germany, whose record up to last May is as follows:

Two anrochs, or European bison, 1 elk, 738 red stags, 58 redbirds, 95 fallow bucks, 41 fallow does, 3 reindeer, 1524 large wild boars, 181 small boars, 121 chamois, 469 roebucks, 11,466 hares, 638 rabbits, 1 whale, 37 caracul cock, 4 black cocks, 728 pheasants, 407 partridges, 2 woodcocks, 56 wild ducks, 3 bears, 17 foxes, and 699 herons and cormorants. This list, however, does not include all the evidences of the emperor's prowess, for there must be added to it 559 head of different sorts. Altogether the German emperor is responsible, therefore, for the death of 25,376 head of game.

Onto It.

Van Dyke—"I er—"

Mrs. Van Dyke—"Now be careful what you say, William. Don't think you can throw me off the scent."—Boston Herald.

DOES NOT PROVE RACE.

It is a Distinction of Secondary Ethnological Importance.

Language, like religion, is a distinction of quite secondary ethnological importance, says the Monist. After an individual has remained a long time in a country he usually learns the language and its customs. And yet the Italian colony in France is made up chiefly of immigrants more or less transient who scarcely ever learn to speak the language of the country they inhabit. But the Italian laborers are contented with very low wages. They therefore compete with French laborers and thus tend to lower their wages. But in Austria, where there are, according to the last census, about 46,000 Italians, almost all laborers are no higher than those of the Italians; hence between the two there arise no serious competition. There is, however, the same difference of language. In France the union of native laborers against the Italian is not on account of any antagonism of race, but solely an economic phenomenon. The same thing does not happen in Austria because there is no antagonism.

In France the Italian language has become almost a mark of distinction of the laborers accepting a low wage. "In India," says Huxton, "similarity of food is employed as an exterior sign of community of blood." Now, what would be said of an ethnographic classification of Indian races based upon eating? Language is no better, for it is only an external characteristic of no intellectual or physiological importance. If it were taken as the principal distinction of the various races it would have to be admitted that the people who speak the modern Romance languages are not Latin—but that would be absurd. Frederick Muller, taking language as the distinguishing feature of human races, is not able in his ethnography to avoid a classification entirely empirical. He forgets that an inferior people may learn a language from one race to another. "There is no proof," says Huxley, "for asserting the incapacity of a race to substitute another language for its own. Physical, moral and mental peculiarities are transmitted with blood and not with language. In the United States the negroes have spoken English for generations."

The New Bachelor.

Slowly he disrobed, placed his slippers on a convenient chair, did up his whiskers and prepared to retire for the night. The final duties accomplished, he bent fearfully down and peered under the bed. Then, with a sigh of relief, he arose from his uncomfortable posture.

"Thank heaven, there is no woman there!" he murmured, as he sat on the edge of the bed and daintily scratched the back of his neck.

"Supposing there had been?" he continued, suddenly. "Would I have screamed? Would I?"

"For a moment he passed."

"Not on your natural, I wouldn't," he then exclaimed. "I would have assayed her and tied her to the chimney! But she will never come! Never! Never!"

And throwing himself, with a moan, on the bed, the new bachelor fell into a fitful, sobbing slumber.—New York World.

Our School Books.

The great fad made by the G. A. R. over school histories will accomplish much good if sectional bitterness is avoided. As the matter stands now, the publishers are entirely to blame. There are firms in the school-book publishing business who employ a man in each state to write the history of that state, and he is expected to glorify things within its borders. He is generally a partisan. Whatever of prejudice he may have against national institutions is eliminated, but a great deal of unhistoric expertise is jammed through the completed work.

A Champion Game Master.

Earl de Grey holds the championship among the world's hunters for the quantity of game killed by one man. He is now 35 years old and during the past twenty years he has averaged 2,000 head of game each year. On one occasion he shot at fifty pheasants in three minutes and killed all but one of them. He has killed eleven tigers, a number of elephants and rhinoceroses, leopards and lions.—New York World.

FEMININE NOTES.

Miss Edith Thomas of New York is the most beautiful player upon chess in the world.

The late Miss Julia Cooper of New York left \$150,000 to the Cooper union—a sum which will enable the institution to receive 200 more pupils.

Mrs. Anna Randall Diehl is president of the oldest Shakespearean club in the United States. It is composed of very progressive women of Brooklyn.

The Women's Rest Tour Association with headquarters in Boston and membership of 400, has established traveling fund, lending money to women in need of holiday trips.

The German government has commissioned Mrs. Guild, an American, to execute two statues representing the post and the telegraph, to be placed on the new general postoffice in Berlin.

Mrs. Raymond, the mother of the president of Vassar college, has given the Foreign Missionary Society of the Epiphany Baptist Church, New York, \$11,000 for the education of health women.

Miss Hilda Clark will be the prima donna with the Bostonians next season. Miss Alice Neilson, who is one of the two leading sopranos of the company, will sail for Europe in July, to study with Mme. Marchesi in Paris for a year or two.

Mrs. Oliphant is in Italy to gather material for a volume which she will entitle "Siena." It will form one of a series of books on historic towns of the medieval period. The books will be illustrated by artists living in localities where the scenes are to be depicted.

A fact worth recording is that the male employees of many German factories are forbidden to wear corsets during working hours.

The Kaiser's 25,376 Head of Game.

All the princes of the world are addicted to hunting, and few have been more successful in their day than the present Kaiser of Germany, whose record up to last May is as follows:

Two anrochs, or European bison, 1 elk, 738 red stags, 58 redbirds, 95 fallow bucks, 41 fallow does, 3 reindeer, 1524 large wild boars, 181 small boars, 121 chamois, 469 roebucks, 11,466 hares, 638 rabbits, 1 whale, 37 caracul cock, 4 black cocks, 728 pheasants, 407 partridges, 2 woodcocks, 56 wild ducks, 3 bears, 17 foxes, and 699 herons and cormorants. This list, however, does not include all the evidences of the emperor's prowess, for there must be added to it 559 head of different sorts. Altogether the German emperor is responsible, therefore, for the death of 25,376 head of game.

GOLGOTHA OF PACIFIC

AN ISLAND COVERED WITH OLD HUMAN BONES.

Extinct Race of Veritable Giants—Capture of the sole Survivor of the Ancient Race That Inhabited San Nicolas Island.

(Santa Barbara Letter.)

THE Channel Islands have long been known among the old time residents of California as the Golgotha of the Pacific, for nowhere else in the world are there probably as many human bones and skeletons lying ex-

posed to the elements as there.

These islands have been objects of romantic legends, curiosity and mystery for two generations or more. Notwithstanding that they are 28 miles off the Oregon shore, they are solitary and unpopulated.

As far back as the memory of any

is far back as the memory of any person in South California runs, hundreds of white skeletons have dotted the valleys and hillsides of San Nicolas Island, one of the group. Strange minerals of serpentine, sandstone, and obsidian are found there among the human bones, and the island and its inhabitants have a history so curious that it is difficult of comprehension.

In 1835 the Franciscan padres in the Santa Barbara mission, learning that there were but 16 of the strange Indian race then living, determined to rescue them from the island. They went over in a sloop and succeeded, as they thought, in getting all on board. At the last moment an Indian woman returned for her child, and remained. Sixteen years later Capt. George Nidever and two men went from the coast in a sloop to hunt sea otters off San Nicolas. On landing they, like Crusoe, were astonished to discover human footprints in the sand. They saw no one, however, and a storm compelled them to put to sea. It was two years later that the captain, revolving in his mind the sight of the footprints in the

CAPTURE OF THE WILD WOMAN.

uncanny island, determined to go and discover and bring over the lovely woman of whom he had vaguely heard. Men accompanied him, and at length they saw on the surf beaten shore a woman with long, tawney hair, dressed in a queer garb of colored bird skins, and scraping with a bone knife the blubber from a seal. They surrounded and approached her stealthily. Although suddenly confronted, she did not appear to be in the least afraid, but smiled, and then falling on her knees, prayed to the sun. She offered no objection when, by signs, she was made to understand that she was to go with them in the boat.

They searched Santa Barbara across the rough sea, and the first thing the Indian woman saw was Dr. S. L. Shaw, who is still living at the age of 80 years, riding a horse. She had never seen a spectacle like it, and thought the man and horse were one, and she knelt on the shore and offered her devotions to it. Two weeks afterward the last inhabitant of rock ribbed, tempest beaten San Nicolas died from eating food to which she was unaccustomed, and the curtain fell on her race forever.

the curtain fell on her race for ever. The woman, known as the "Lone Woman of San Nicholas," has been the subject of a score of romances and poems and food for a lot of philosophy of the coast.

San Nicolas is ten miles wide and four miles across at the widest point. Nothing more desolate than the general appearance of the island can be imagined. As far as the eye can trace there are barren levels, with innumerable circular depressions, showing where primitive dwellings once stood. Not a vestige remains of the materials used in the construction of these rancherias. Hundreds of shell mounds are scattered about, and are found to consist of astonishing numbers of mollusks, the bones of every species of fish found in the channel, skeletons of seals, sea elephants, sea otters, whales, the island fox and various aquatic birds. Without question these animals were used for food by the tribes that once thronged the island. There are numbers of canine skeletons, several of which indicate a species of bull terrier.

An examination of some of the

which indicate a species of Sam Corrier.

An examination of some of the mounds discloses all sorts of curious utensils, stone cooking pots, water ollas, mortars, pestles, drills, bone needles, and fish hooks, shell beads, charm stones, pipes, cups, and a few arrow heads, spear points, and swords made of bone. The absence of many weapons proven the peaceful attributes of the islanders. Small imitations of boats and fishes carved from crystalized talc and serpentine also show a rudimentary knowledge of the art of sculpture. No trace is seen of the brush pens, in which the lone woman of San Nicolas for years found her only shelter from the cutting wind and sand. Every foot of this strange island is eloquent of the extinction of an almost unheard-of people.

The strangest of all the sights on this island is to be seen on the broad plateau south of the Chinese camp at Coral harbor. Here acres of the sand are littered with thousands of disjointed skeletons. Measurements have been made by several scientists of the thigh, leg and arm bones, and literally bushels of skulls and other parts of the human frame have been brought to Los

Angeles from San Nicolas island for investigation. The general opinion is that the physique of the Indian race that swarmed over the island then was very much larger than that of any civilized race of today, and that some of them must have been seven feet three inches tall. The skulls of this extinct tribe often measure several inches more than some of the skulls of today. Many skulls found lying about on the island show that their possessors must have suffered death from a club or blunt battle ax. No one has yet found a skull on San Nicholas that shows marks of a bullet.
