Instead of Saturday the swim between William Glover, of this city, and Carlisle D. Goss through the Niagara Rapids will not take place until next Monday afternoon.

Winners at Buffalo were Ruth W. Tuckan, Spring, Away and Truhan.

The New York stock market was not moved by the government crop report was relatively unimportant influence.

HOW TO DETECT IMPURE FOODS

AN EXPERT POINTS OUT MANY IMPERFECTIONS.

Dr. W. D. Bigelow, Chief of Division of Foods, Bureau of Chemistry, United States Department of Agriculture, Gives Tests to Be Applied to What We Eat—Canned Vegetables a Great Boon Conferred Upon Mankind.

The relative complexity of present day life is well illustrated by the varied means of the average family, says Dr. W. D. Bigelow, chief of Division of Foods, Bureau of Chemistry, United States Department of Agriculture. The preservation of food by the process known as "canning" began a little more than 100 years ago, but became general only about the middle of the last century. It began in the home and gradually extended to the factory. The canning industry has been built up largely within the present generation. This method of preserving food has done more for the health of people than any other agencies combined. In our large markets many green vegetables can be found at all times, but only the wealthy can afford to buy them. The same articles can be obtained in midwinter, preserved in glass or tin, but little inferior in the fresh article, and at a price that little in advance of that of the fresh article in the season. Inferior grades of canned food can be obtained at a much lower price.

This class of food is subject to adulteration to a great extent, except that inferior goods are sometimes sold when the first quality is known. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry.

The most prevalent fraud in connection with this industry is the sale of thoroughly ripe vegetables, especially peas, for the green, succulent article, which is supposed to be canned. The peas are often soaked in water for the purpose of softening it, and then cooked and canned. The same process is applied to the green peas. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry.

Peas, for instance, which have not become thoroughly ripe, but which are practically mature, are frequently canned and sold as "sifted green peas." Peas which are almost mature when they are canned resemble soaked peas more nearly than they do those put up at the proper stage of maturity. The process of canning commonly bursts their outer layer and the embryo protrudes to a considerable extent. The peas are often soaked in water for the purpose of softening it, and then cooked and canned. The same process is applied to the green peas. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry. The adulteration is done in various ways. The quality of first-class canned goods, and this injures the industry.

GOOD BLOOD TELLS ITS OWN STORY

And tells it eloquently in the bright eye, the supple, elastic movement, the smooth, soft skin, glowing with health, a body sound and well, an active brain, good appetite and digestion, refreshing sleep, energy to perform the duties and capacity to enjoy the pleasures of life. The blood is the most vital part of the body; every organ, muscle, tissue, nerve, sinew and bone is dependent on it for nourishment and strength, and as it circulates through the system, pure and strong, it furnishes to these different parts all the healthful qualities nature intends. When, from any cause, the blood becomes impure or diseased, it tells a different story, quite as forceful in its way. Itching, burning skin diseases, muddy, sallow complexion, drops, boils, carbuncles, etc., show the presence, in the blood, of some foreign matter or poison. Rheumatism, Catarrh, Contagious Blood Poison and Scrofula, are effects of a deeply poisoned blood circulation. These may be either inherited or acquired, but the best of trouble is the same—the blood. S. S. S., a purely vegetable blood remedy, cleanses and purifies the circulation and makes it strong and clear. Under its purifying and tonic effects all poisons and impurities are expelled from the blood, the general health is built up, all disfiguring eruptions and blemishes disappear, the skin becomes soft and smooth and robust health blesses life. Rheumatism, Catarrh, Scrofula, Contagious Blood Poison and all diseases of the blood are cured by S. S. S. Book on the Blood and any medical advice, free of charge.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

HIS ANNUAL STRUGGLE

THRIFT OF THE DUTCH

Their Large Holdings of American and Other Loans.

"The people of the Netherlands," says Consul General Gouther, at Frankfurt, in a report, "are thrifty and economical, excellent merchants, and in proportion to population, their nation is one of the richest in the world. They are cosmopolitan, and large minded in the investment of their capital. They were the first and most extensive foreign buyers of United States bonds of 1865, but did not touch the Confederate loans. According to estimates of official statistical and financial sources Dutch capital to the amount of \$24,000,000 is invested in American bonds and shares and \$400,000,000 in Russian bonds and shares. Much of the Dutch capital are invested in Mexican government bonds and in bonds and shares of Mexican railroad and industrial companies, also in the government and railroad bonds of Austria-Hungary, Portugal and numerous other countries. The Netherlands, working profitably in the Dutch Indian colonies in sugar, tobacco and rubber plantations, the mining of tin, and in metals, petroleum wells, etc. A financial book of reference places the capital of all Dutch colonies at \$1,000,000,000, but this does not embrace the numerous Dutch companies which have their headquarters in the Netherlands, and in this respect is even surpassed by not a few of the great powers. The Netherlands, also having neither coal nor iron, has been able to develop a powerful commercial spirit and have a large merchant marine. The rural inhabitants are given to raising cattle and sheep, and horticulture, in which branches they excel."

Disbelief Compliment to an Author At a literary dinner two minor poets were heard in conversation. "Did you read the book?" "Yes," said the other. "I heard a neat compliment passed on it by a young man. 'What did he say?'" "He said, 'I had seen it written.'"

INSECTS THAT FIDDLE TUNES

Grasshoppers and Others of Its Species Play Love Duet.

[From the Philadelphia North American.] The art of fiddling is not possessed by man alone. Insects of the field and forest—many of them harmless and others classed in the category of pests—have a little fiddle and bow of their own, and use them to attract their mates. By means of their violin strings certain insects call upon their mates, give signals, communicate intelligence, and, perhaps, give expression to their own little emotions. They do not confine themselves to one tune, but play a variety of music, sometimes of a melancholy and sometimes of a joyous character. The method of operation is similar to that of the human violinist. The insect produces a single note by the little muscles of the abdomen. The male alone fiddles, and he fiddles to attract the female. The female alone fiddles, and she fiddles to attract the male. The male alone fiddles, and he fiddles to attract the female. The female alone fiddles, and she fiddles to attract the male.

STORY OF A WOMAN CRUSOE

Unlike Defoe's Hero, Her End Is Pathetic in the Extreme.

[From Field and Stream.] Begun during the war of Point Conception, on the California coast, and continuing at irregular intervals as far south as the Bay of Todos Santos, in Lower California, the Channel Islands, the story of a woman Crusoe is a tale of the most interesting and the most pathetic. The story is told in a simple and direct manner, and the reader is drawn into the life of the woman Crusoe. The story is told in a simple and direct manner, and the reader is drawn into the life of the woman Crusoe.

FOODS AND FADS AND THEIR EVILS

COMPLAINTS ARE FASHIONABLE NOWADAYS.

Persons Who Believe That They Are Suffering With All Kinds of Maladies—Jerome K. Jerome Came to the Conclusion After Reading a Medical Book That The Only Disease from Which He Was Not Suffering Was the "Housemaid's Knee."

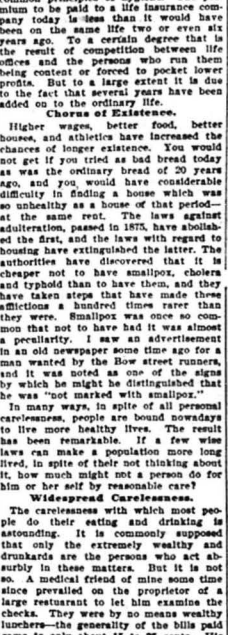

It would be hard to forget ill health nowadays, however well one might be oneself. The newspapers are full of discussions respecting every variety of it. As one walks down a street one sees on the walls the advertisements of pills, nerve fortifiers, tonics and cures for ailments of every kind. The afflictions of men and women are kept vigorously before our eyes. We could not forget them even if we never had a day's illness, says Prof. E. M. Minot in the Washington Post. My pessimistic friends all declare that this shows that we are in a bad way—that as far as body vigor and health is concerned, "we are going to the dogs." It is really hardly possible sometimes not to believe that we must all be desperately ill. Jerome K. Jerome relates how, having read a medical book, he came to the conclusion that he was suffering from all the ailments of the human body. He was not suffering from the "housemaid's knee," but he was suffering from all the ailments of the human body. He was not suffering from the "housemaid's knee," but he was suffering from all the ailments of the human body.

STORY OF A WOMAN CRUSOE

Unlike Defoe's Hero, Her End Is
Pathetic in the Extreme.

[From Field and Stream.]

Beginning due west of Point Conception, on the California Coast, and continuing at irregular intervals as far south as the Bay of Todos Santos, in Lower California, lie the Channel Islands. In this ideal region for the yachtsman, the fisherman and the hunter one comes to feel like a new Crusoe on his primitive isle. And in very truth Crusoe's semimythical story was enacted upon one of these same islands, though minus the man Friday and the happy ending.

The castaway in this case was a woman, a Danish emigrant, left ashore through some mischance by the crew of a vessel that had sought shelter behind San Nicholas during a storm in the early 50s. For over 17 years the lone creature lived unsought and forgotten, though the time at length came when, on the days the mist-clearing north wind blew, she could climb to the island's highest point and view the ranchers' herds grazing upon the mainland.

And at last, when hope and reason had both long died, the poor, wild gibbering creature was found in her wolf's burrow among the hills by the advance guard of the otter hunters' fraternity, who had long wondered at the mysterious foot-prints they marked upon the lonely sands.
